Genetic Resources, Data, and Literature Jerome H. Reichman, Paul F. Uhler, Tom Dedeurwaerdere, 2016-05-19 The free exchange of microbial genetic information is an established public good facilitating research on medicines agriculture and climate change However over the past quarter century access to genetic resources has been hindered by intellectual property claims from developed countries under the World Trade Organization's TRIPS Agreement 1994 and by claims of sovereign rights from developing countries under the Convention on Biological Diversity CBD 1992 In this volume the authors examine the scientific community's responses to these obstacles and advise policymakers on how to harness provisions of the Nagoya Protocol 2010 that allow multilateral measures to support research By pooling microbial materials data and literature in a carefully designed transnational e infrastructure the scientific community can facilitate access to essential research assets while simultaneously reinforcing the open access movement The original empirical surveys of responses to the CBD included here provide a valuable addition to the literature on governing scientific knowledge commons

access policy initiatives have been strongly opposed by research based drug companies arguing that mandatory data disclosure impedes their innovation incentives Conventionally access to test data has been approached from the perspective of transparency and research ethics The book offers a complementary view and considers access to individual patient level trial data for exploratory analysis as a matter of research and innovation policy Such approach appears to be especially relevant in the data driven economy where digital data constitutes a valuable economic resource The study seeks to define how the rules of access to clinical trial data should be designed to reconcile the policy objectives of leveraging the research potential of data through secondary analysis on the one hand and protecting economic incentives of research based drug companies on the other hand Overall it is argued that the mainstream innovation based justification for exclusive control over the outcomes of research and development can hardly rationalise trial sponsors control over primary data from trials Instead access to such data and its robust analysis should be prioritised
