Fundamentals of Global Positioning System Receivers James Bao-Yen Tsui, 2004-12-20 All the expert guidance you need to understand build and operate GPS receivers The Second Edition of this acclaimed publication enables readers to understand and apply the complex operation principles of global positioning system GPS receivers Although GPS receivers are widely used in everyday life to aid in positioning and navigation this is the only text that is devoted to complete coverage of their operation principles The author one of the foremost authorities in the GPS field presents the material from a software receiver viewpoint an approach that helps readers better understand operation and that reflects the forecasted integration of GPS receivers into such everyday devices as cellular telephones Concentrating

on civilian C/A code the book provides the tools and information needed to understand and exploit all aspects of receiver technology as well as relevant navigation schemes Overview of GPS basics and the constellation of satellites that comprise the GPS system Detailed examination of GPS signal structure acquisition and tracking Step by step presentation of the mathematical formulas for calculating a user's position Demonstration of the use of computer programs to run key equations Instructions for developing hardware to collect digitized data for a software GPS receiver Complete chapter demonstrating a GPS receiver following a signal flow to determine a user's position The Second Edition of this highly acclaimed text has been greatly expanded including three new chapters Acquisition of weak signals Tracking of weak signals GPS receiver related subjects Following the author's expert guidance and easy to follow style engineers and scientists learn all that is needed to understand build and operate GPS receivers The book's logical flow from basic concepts to applications makes it an excellent textbook for upper level undergraduate and graduate students in electrical engineering wireless communications and computer science

Distributed Acoustic Sensing in Borehole Geophysics Yingping Li, Robert Mellors, Ge Zhan, 2024-12-24 Presents the latest advances in borehole distributed acoustic sensing and diverse applications for subsurface geophysics Borehole geophysics involves measuring imaging and monitoring subsurface structures and activities by putting instruments into wellbores Distributed acoustic sensing DAS technology is emerging as an effective and reliable tool in borehole geophysics because optic fiber cables deployed at depth can produce high quality data and images even in harsh high temperature and high pressure environments Distributed Acoustic Sensing in Borehole Geophysics is a comprehensive handbook on cutting edge advances in borehole DAS technologies and their practical applications across geophysics Volume highlights include Summary of evolution of DAS technologies and their primary applications New developments in borehole DAS instrumentation and modeling Examples of DAS data acquisition and processing in different contexts Variety of imaging methods and techniques for integration of images with other data Applications of borehole DAS systems including monitoring earthquakes and hydraulic fracturing operations Case studies of borehole DAS projects at diverse sites around the world ranging from glaciers to geothermal fields The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals

IUTAM Symposium on Simulation and Identification of Organized Structures in Flows J.N. Sørensen, E.J. Hopfinger, N. Aubry, 2012-12-06 The dynamics of transitional and turbulent flows is often dominated by organized structures with a life time much longer than a characteristic time scale of the surrounding small scale turbulence Organized structures may appear as secondary flows as a result of an instability but they persist in turbulent flows They manifest themselves as eddies or localized vortices and play an important role in e.g. mixing and transport processes Although the existence of organized structures has been revealed by many experiments and by numerical simulations they are somewhat elusive as there is no consensus on how to define them and technically how to detect them In recent years several

identification tools for analysing complex flows have been developed These tools include various versions of the Proper Orthogonal Decomposition POD technique wavelet transforms pattern recognition etc At the same time improvements in experimental techniques have made available data that further necessitate efficient detection methods A prominent example is the Particle Image Velocimetry PIV technique from which complex spatio temporal flow data can be obtained An interesting feature of some of the identification techniques is that they form the basis for reduced models by which dynamical processes can be studied in details From studies of dissipative dynamical systems it has been revealed that in phase space transitional and turbulent flows can be identified by their low dimensional behaviour Thus employing data from experiments or numerical simulations to form modes residing on finite dimensional attractors may dramatically reduce computing costs

The Proceedings of 2024 International Conference on Artificial Intelligence and Autonomous Transportation Jun Liu, Jianjian Yang, Minyi Xu, Quan Yu, Wenchao Shen, 2025-03-27 This book reflects the latest research trends methods and experimental results in the field of Artificial Intelligence and Autonomous Transportation which covers abundant state of the art research theories and ideas As a vital research area that is highly relevant to current developments in a number of technological domains the topics covered include Autonomous Transportation Systems Autonomous Transportation Management and Control Technology Autonomous Transportation Equipment Technology Vehicular Networking and Information Security Emerging Technologies and Future Mobility Intelligent water transportation technology Cross Domain Transportation Technology and so on The goal of the proceedings is to provide a major interdisciplinary forum for researchers engineers academics and industry professionals to present the most innovative research and development in the field of Artificial Intelligence and Autonomous Transportation Engineers and researchers from academia industry and government will also explore an insight view of the solutions that combine ideas from multiple disciplines in this area The volumes serve as an excellent reference work for researchers and graduate students working in the areas of rail transportation electrical engineering and information technology **Proceedings** IEEE Computer Society, 1997
