

The following is an example of an actual investigation that occurred several decades ago. It is a prime example of how to perform an outbreak investigation with little to no lab facilities available to you.

PART I – Background

On April 19, 1940, the local health officer in the village of Lycoming, Oswego County, New York, reported the occurrence of an outbreak of acute gastrointestinal illness to the District Health Officer in Syracuse. Dr. A. M. Rubin, epidemiologist-in-training, was assigned to conduct an investigation. When Dr. Rubin arrived in the field, he learned from the health officer that all persons known to be ill had attended a church supper held on the previous evening, April 18. Family members who did not attend the church supper did not become ill. Accordingly, Dr. Rubin focused the investigation on the supper. He completed interviews with 75 of the 80 persons known to have attended, collecting information about the occurrence and time of onset of symptoms, and foods consumed. Of the 75 persons interviewed, 46 persons reported gastrointestinal illness.

Question 1: Would you call this an epidemic or an outbreak?

What is the definition of each?

1. epidemic –

2. outbreak -

2. Establish the existence of an outbreak

6. Perform descriptive epidemiology and develop hypotheses
