Considine, Glenn D. Considine, 2013-12-11 Advancements in science and engineering have occurred at a surprisingly rapid pace since the release of the seventh edition of this encyclopedia Large portions of the reference have required comprehensive rewriting and new illustrations Scores of new topics have been included to create this thoroughly updated eighth edition The appearance of this new edition in 1994 marks the continuation of a tradition commenced well over a half century ago in 1938 Van Nostrand's Scientific Encyclopedia First

Edition was published and welcomed by educators worldwide at a time when what we know today as modern science was just getting underway. The early encyclopedia was well received by students and educators alike during a critical time span when science became established as a major factor in shaping the progress and economy of individual nations and at the global level. A vital need existed for a permanent science reference that could be updated periodically and made conveniently available to audiences that numbered in the millions. The pioneering VNSE met these criteria and continues today as a reliable technical information source for making private and public decisions that present a backdrop of technical alternatives.

Workers, Managers, and Technological Change Daniel B. Cornfield, 2013-11-11

Workers, Managers, and Technological Change: Emerging Patterns of Labor Relations contributes significantly to an important subject. Technological change is one of the most powerful forces transforming the American industrial relations. In fact, the synergistic relationships between technology and industrial system relations are so complex that they are not well or completely understood. We know that the impact of technology while not independent of social forces already has been profound; it has transformed occupations, creating new skills and destroying others, altered the power relationships between workers and managers, and changed the way workers learn and work. Technology also has made it possible to decentralize some economic activities out of large metropolitan areas and into small towns, rural areas, and other countries. Most important, information technology makes it possible for international corporations to operate on a global basis. Indeed, some international corporations, especially those based in the United States, are losing their national identities, detaching the welfare of corporations from that of particular workers and communities. Internationalization facilitated by information technology has transformed industrial relations systems. A major objective of the traditional American industrial relations system was to take labor out of competition.
