Architecture Micheline Nilsen, 2017-07-05 Eschewing the limiting idea that nineteenth century architecture photography merely reflects functionality the objective of this collection is to reflect the aesthetic intellectual and cultural concerns of the time The essays hold appeal for social and cultural historians as well as those with an interest in the fields of art history urban geography history of travel and tourism Nineteenth century photographers captured what could be seen and what they wanted to be seen Their images informed of exploration progress heritage and destruction Architecture was a staple subject for the first generation of photographers as it patiently tolerated the long exposures of the early processes During its formative decades photography responded to evolutionary cultural forces of market and artistic production Photographs of architecture reflected a specific political or social context modulated through individual points of view For this reason the examination of each photographic image as a primary visual document and an aesthetic object rather than a technical milestone on a chronological trajectory affords a richer multi faceted approach to the extensive and complex corpus of photographs taken by photographers all over the world This project acknowledges the importance of technique in the early decades of photography but focuses on the thematic content of the material It places the photography of architecture in an international context under the contemporary critical lens sharpened by theoretical and cultural examinations of the topic

Colonialism as Civilizing Mission Harald Fischer-Tiné, Michael Mann, 2004 Inherent in colonialism was the idea of self

legitimation the most powerful tool of which was the colonizer's claim to bring the fruits of progress and modernity to the subject people. In colonial logic people who were different because they were inferior had to be made similar and hence equal by civilizing them. However, once this equality had been attained the very basis for colonial rule would vanish. Colonialism as Civilizing Mission explores British colonial ideology at work in South Asia. Ranging from studies on sport and national education and pulp fiction to infanticide, psychiatric therapy and religion, these essays on the various forms, expressions and consequences of the British civilizing mission in South Asia shed light on a topic that even today continues to be an important factor in South Asian politics.

Further Studies in the History of Construction: the Proceedings of the Third Annual Conference of the Construction History Society James Campbell, Nicholas Bill, Yiting Pan, Nina Baker, Michael Driver, Michael Heaton, Michael Tutton, Christine Wall, David Yeomans, 2016. This book is the third in the series of volumes which provide the papers of the conferences held at Queens College Cambridge by the Construction History Society. Papers cover different aspects of the history of construction including studies of different building materials, building firms, the development and education of building professionals, the construction of buildings and infrastructure, methods and techniques of construction and other subjects related to the history and development of buildings.

Masonry Bridges, Viaducts and Aqueducts Ted Ruddock, 2017-05-15. For 2 000 years the most durable spanning structures have been built of masonry and the surviving bridges of the Roman Empire have challenged master masons, architects and engineers to emulate and surpass them. Down the centuries bridge builders have been commissioned by monarchs, bishops, councils of state, cities, private individuals and more recently waterway and railway companies. The studies collected in this volume focus chiefly on the bridges, viaducts and aqueducts themselves and the actions of the designers and builders, but also encompass the political, economic and social contexts and outcomes of their creation. Famous bridges in Britain, Italy, France, Iran and the USA are all featured. Narratives of conception, design and construction predominate, but there are also papers on construction techniques, on the analysis of documentary sources and on the continuing search by modern engineers for satisfactory scientific description of the strength and stability of arch bridges.
