Building Energy Management Systems Geoff Levermore, 2013-07-04 Energy management systems are used to monitor building temperature inside and outside buildings and control the boilers and coolers Energy efficiency is a major cost issue for commerce and industry and of growing importance on university syllabuses Fully revised and updated this text considers new developments in the control of low energy and HVAC systems and contains two new chapters Written for practising engineers essential for control engineers and energy managers in addition to being essential reading for under postgraduate courses in building services and environmental engineering

Energy Management and Operating Costs in Buildings Keith Moss, 2013-06-17 Managing the consumption and conservation of energy in buildings must now become the concern of both building managers and occupants The provision of lighting hot water supply communications cooking space heating and cooling accounts for 45 per cent of UK energy consumption Energy Management and Operating Costs in Buildings introduces the reader to the principles of managing and conserving energy consumption in buildings people use for work or leisure Energy consumption is considered for the provision of space heating hot water supply ventilation and air conditioning The author introduces the use of standard performance indicators and energy consumption yardsticks and discusses the use and application of degree days

Environmental Design Randall Thomas, 2006-06-07 Written and edited by a team of specialists at Max Fordham LLP one of the UK's leading environmental and building services engineering consultancies Environmental Design is the result of their extensive experience in designing environmentally friendly buildings The principles of their approach which they have taught in numerous schools of architecture and engineering are clearly presented here The book starts with some basic scientific principles and environmental issues and then moves on to site planning energy use materials and building form Natural ventilation systems high efficiency mechanical equipment and alternative energy sources are also covered State of the art buildings of exceptional quality are incorporated throughout the text and illustrate the authors belief that environmentally responsible architecture can be visually exciting They conclude with a selection of detailed case studies of award winning projects including new for this third edition Beaufort Court King's Langley and the National Trust Headquarters Swindon This book is essential reading for architects engineers planners and students of these disciplines

The result is a comprehensive guide covering the selection of HVAC systems and the design process from initial drafts through to implementation. The second edition builds on the success of this popular guide with references to UK and EU legislation fully updated throughout and coverage fully in line with the latest CIBSE guides. *Heating Systems, Plant and Control* Antony R. Day, Martin S. Ratcliffe, Keith Shepherd, 2008-04-15

In many climates buildings are unable to provide comfort conditions for year round occupancy without the benefit of a heating system and most HVAC engineers will routinely be involved with issues concerning the design, installation and performance of such systems. Furthermore in temperate climates heating of buildings accounts for a large slice of annual carbon emissions. The design of heating systems for maximum efficiency and minimum carbon emission is therefore now a matter of prime concern to all HVAC engineers. The book provides an up to date review of the design, engineering and control of modern heating systems. Part A deals with heat generating plant. While this concentrates on conventional and condensing boilers, small scale combined heat and power systems and heat pumps are also discussed. Part B deals with heat emitters, pipe circuits and variable speed pumping, hot water service, optimum plant size and the vital issues of plant and system control including sequence control of multiple boilers. Techniques for managing the energy use and running costs of heating systems are also discussed. The authors have brought together over a half century of combined experience covering all aspects of the building services industry to provide an up to date and comprehensive text that is both technically rigorous yet highly practical. This makes the book equally relevant to the busy HVAC engineer looking for a handy practical reference, the student looking to build on their basic knowledge or the researcher interested in key issues of heating system design and performance. **Air Conditioning** David V. Chadderton, 2012-08-06

This expanded edition of David Chadderton's *Air Conditioning* is a textbook for undergraduate courses in building services and environmental engineering and for BTEC continuing education diploma, higher national diploma and certificate courses in building services engineering. It will also be of considerable help to students on national certificate and diploma programmes.
