Speedlights & Speedlites Lou Jones, 2013-06-19 Canon Speedlites and Nikon Speedlights are small off camera flashguns that can provide big results if you know how to use them properly. Acclaimed Boston photographers Lou Jones, Bob Keenan and Steve Ostrowski guide you through the technical and creative aspects of how to get the most out of these powerful tools in this indispensable guide packed full of inspirational images and comprehensive diagrams of the lighting set ups used to capture them. They are significantly more advanced, lighter and considerably cheaper than a standard flashgun and have many advantages. They are small and cheap enough that a number can be carried in your kit and they can be used in combination, triggered wirelessly. They use through the lens TTL metering which allows you to use the in camera LCD and histograms to calculate the required power, direction rather than having to use a light meter or trial and error. They use proprietary dedicated technology from Canon and Nikon that means there are no compatibility issues. Getting the most out of them, however, remains a mystery; most photographers still just use their speedlights in the same way as a standard flash gun. This is where this book comes in.

The Frankencamera Eino-Ville Aleksi Talvala, 2011 Digital cameras, both in traditional form factors and as parts of cell phones, have become ubiquitous over the last decade. But for the most part they remain black boxes to the end user and cannot be reprogrammed or modified. This has become an obstacle to researchers in the new field of computational photography who want to use the growing computing power of digital cameras to create images no traditional camera could produce. This dissertation presents the Frankencamera platform, a digital camera system

designed for computational photography The Frankencamera is a fully open fully programmable digital camera which can be easily modified to test out new research ideas The Frankencamera architecture allows for per frame control of the capture process and accurate synchronization of all the components that make up the camera Based on this architecture this dissertation details two hardware platforms the F2 a flexible custom built camera and the Nokia N900 a commercial smartphone Both platforms can be easily programmed at a high level using the FCam API written to embody the Frankencamera architecture Finally this dissertation presents several sample applications for the Frankencamera platform Several of these applications could not have been developed for any existing camera platform and the ease and speed at which they were written show that the Frankencamera platform is a compelling tool for computational photography
