Phase Transitions in Combinatorial Optimization Problems Alexander K. Hartmann, Martin Weigt, 2006-05-12 A concise comprehensive introduction to the topic of statistical physics of combinatorial optimization bringing together theoretical concepts and algorithms from computer science with analytical methods from physics The result bridges the gap between statistical physics and combinatorial optimization investigating problems taken from theoretical computing such as the vertex cover problem with the concepts and methods of theoretical physics The authors cover rapid developments and analytical methods that are both extremely complex and spread by word of mouth providing all the necessary basics in required detail Throughout the algorithms are shown with examples and calculations while the proofs are given in a way suitable for graduate students post docs and researchers Ideal for

Hamacher, Süleyman Tüfekci, 2012-12-06 There have been significant developments in the theory and practice of combinatorial optimization in the last 15 years This progress has been evidenced by a continuously increasing number of international and local conferences books and papers in this area This book is also another contribution to this burgeoning area of operations research and optimization This volume contains the contributions of the participants of the recent NATO Advanced Study Institute New Frontiers in the Theory and Practice of Combinatorial Optimization which was held at the campus of Bilkent University in Ankara Turkey July 16-29 1990 In this conference we brought many prominent researchers and young and promising scientists together to discuss current and future trends in the theory and practice of combinatorial optimization The Bilkent campus was an excellent environment for such an undertaking Being outside of Ankara the capital of Turkey Bilkent University gave the participants a great opportunity for exchanging ideas and discussing new theories and applications without much distraction One of the primary goals of NATO ASIs is to bring together a group of scientists and research scientists primarily from the NATO countries for the dissemination of advanced scientific knowledge and the promotion of international contacts among scientists We believe that we accomplished this mission very successfully by bringing together 15 prominent lecturers and 45 promising young scientists from 12 countries in a university environment for 14 days of intense lectures presentations and discussions Concepts of Combinatorial Optimization Vangelis Th. Optimization Godfrey C. Onwubolu, Donald Davendra, 2009-01-13 This is the first book devoted entirely to Differential Evolution DE for global permutative based combinatorial optimization Since its original development DE has mainly been applied to solving problems characterized by continuous parameters This means that only a subset of real world problems could be solved by the original classical DE algorithm This book presents in detail the various permutative based combinatorial DE formulations by their initiators in an easy to follow manner through extensive illustrations and computer code It is a valuable resource for professionals and students interested in DE in order to have full potentials of DE at their disposal as a proven optimizer All source programs in C and Mathematica programming languages are downloadable from the website of Springer Combinatorial Optimization Problems in Planning and Decision Making Michael Z.

Zgurovsky, Alexander A. Pavlov, 2018-09-24 The book focuses on the next fields of computer science combinatorial optimization scheduling theory decision theory and computer aided production management systems It also offers a quick introduction into the theory of PSC algorithms which are a new class of efficient methods for intractable problems of combinatorial optimization A PSC algorithm is an algorithm which includes sufficient conditions of a feasible solution optimality for which their checking can be implemented only at the stage of a feasible solution construction and this construction is carried out by a polynomial algorithm the first polynomial component of the PSC algorithm an approximation algorithm with polynomial complexity the second polynomial component of the PSC algorithm also for NP hard combinatorial optimization problems an exact subalgorithm if sufficient conditions were found fulfilment of which during the algorithm execution turns it into a polynomial complexity algorithm Practitioners and software developers will find the book useful for implementing advanced methods of production organization in the fields of planning including operative planning and decision making Scientists graduate and master students or system engineers who are interested in problems of combinatorial optimization decision making with poorly formalized overall goals or a multiple regression construction will benefit from this book
