## **Cosmic Ray Astrophysics Astronomy And Astrophysics Library:**

Cosmic Ray Astrophysics Reinhard Schlickeiser, 2002-10-08 In the first part the book gives an up to date summary of the observational data In the second part it deals with the kinetic description of cosmic ray plasma The underlying diffusion convection transport equation which governs the coupling between cosmic rays and the background plasma is derived and analyzed in detail In the third part several applications of the solutions of the transport equation are presented and how key observations in cosmic ray physics can be accounted for is demonstrated

**Early History of Cosmic Ray Studies** Yataro Sekido, Harry Elliot, 2012-12-06 On the occasion of the International Conference on Cosmic Rays held in Kyoto in August 1979 five aged members of the cosmic ray fraternity H Elliot V L Ginzburg B Peters Y Sekido and J A Simpson met together as a dinner party devoted to the enjoyment of Japanese cuisine and reminiscences of our younger days This pleasant occasion called to of our own age as well as some eminent seniors not present at the mind the many friends conference whose recollections would have further enriched and enlivened our evening By the time the dinner came to an end we had agreed that the compilation of a more extensive collection of personal reminiscences would be an interesting and worthwhile undertaking Accordingly the next day we held an editorial meeting to draw up a list of potential authors and two of us the present editors started work on the project In putting the book together our intention has been to try to capture and record through these personal accounts something of the atmosphere the excitement and the frustrations of research in cosmic rays as experienced at first hand by some of the practitioners in the field It has never been our intention that it should comprise a systematic history of the subject Neither unfortunately can it be a fully representative collection since practical limits to the size of the volume alone would preclude that

High-Redshift Galaxies Immo Appenzeller, 2009-06-17 The high redshift galaxies became a distinct research field during the last decade of the 20th century At that time the Lyman break technique made it possible to identify significant samples of such objects and the new generation of 8 to 10 m telescopes resulted in the first good spectroscopic data Today the high redshift galaxies have developed into one of the important topics of astrophysics accounting for about 5-10% of the publications in the major scientific journals devoted to astronomy Because high redshift galaxies is a rapidly developing field and since new results are published constantly writing a book on this topic is challenging On the other hand in view of the large amount of individual results now in the literature and in view of the still growing interest in this topic it appears worthwhile to summarize and evaluate the available data and to provide an introduction for those who wish to enter this field or who for various reasons might be interested in its results The end of the first decade of the 21st century appears to be a good point in time to attempt such a summary The current generation of ground based 8 to 10 m optical telescopes the Hubble Space Telescope and the most important large radio telescopes have by now been in operation since about one or two decades Although these instruments will continue to produce important scientific results for some time to come many of the initial programs exploiting their unique new possibilities have been

completed *Astrophysical Formulae* Kenneth R. Lang, 2013-12-21 This volume is a reference source of fundamental formulae in physics and astrophysics In contrast to most of the usual compendia it carefully explains the physical assumptions entering the formulae All the important results of physical theories are covered electrodynamics hydrodynamics general relativity atomic and nuclear physics and so on Over 2100 formulae are included and the original papers for the formulae are cited together with papers on modern applications in a bibliography of over 1900 entries For this new edition a chapter on space time matter and cosmology has been included and the other chapters have been carefully revised

**The Universe in X-Rays** Joachim E. Trümper, Günther Hasinger, 2008-02-05 With contributions from leading scientists in the field and edited by two of the most prominent astronomers of our time this is a totally authoritative volume on X ray astronomy that will be essential reading for everyone interested from students to astrophysicists and physicists All the aspects of this exciting area of study are covered from astronomical instrumentation to extragalactic X ray astronomy

**Astroparticle Physics: Theory and Phenomenology** Günter Sigl, 2016-12-05 This book aims at giving an overview over theoretical and phenomenological aspects of particle astrophysics and particle cosmology To be of interest for both students and researchers in neighboring fields of physics it keeps a balance between well established foundations that will not significantly change in the future and a more in depth treatment of selected subfields in which significant new developments have been taking place recently These include high energy particle astrophysics such as cosmic high energy neutrinos the interplay between detection techniques of dark matter in the laboratory and in high energy cosmic radiation axion like particles and relics of the early Universe such as primordial magnetic fields and gravitational waves It also contains exercises and thus will be suitable for both introductory and advanced courses in astroparticle physics

**Eclipsing Binary Stars: Modeling and Analysis** Josef Kallrath, Eugene F. Milone, 2009-08-14 Have you ever stopped at a construction project on the way to your office and the day's astrophysics Remember the other onlookers folks just enjoying the spectacle as we all do in following developments away from our areas of active work We are excited and thrilled when the Hubble Space Telescope discovers an Einstein Cross when the marvelous pulsars enter our lives and when computer scientists put a little box on our desk that outperforms yesterday's giant machines We are free to make use of such achievements and we respect the imagination and discipline needed to bring them about just as onlookers respect the abilities and planning needed to create a building they may later use After all each of us contributes in our own areas as best as we can In addition to the serious onlookers there will be passersby who take only a casual look at the site They may use the building later but have little or no interest in its construction and give no thought to the resources needed to bring it to completion Upon arriving at work those persons write astronomy and astrophysics books at various levels in which they must say something about close binary stars Usually a page or two will do and the emphasis is on the MLR mass luminosity radius data obtained only from binaries

**High Energy Astrophysics** Thierry J.-L. Courvoisier, 2012-10-03 High energy astrophysics has unveiled a Universe very different from that

only known from optical observations It has revealed many types of objects in which typical variability timescales are as short as years months days and hours in quasars X ray binaries etc and even down to milli seconds in gamma ray bursts The sources of energy that are encountered are only very seldom nuclear fusion and most of the time gravitation a paradox when one thinks that gravitation is by many orders of magnitude the weakest of the fundamental interactions The understanding of these objects physical conditions and the processes revealed by high energy astrophysics in the last decades is nowadays part of astrophysicists culture even of those active in other domains of astronomy This book evolved from lectures given to master and PhD students at the University of Geneva since the early 1990s It aims at providing astronomers and physicists intending to be active in high energy astrophysics a broad basis on which they should be able to build the more specific knowledge they will need While in the first part of the book the physical processes are described and derived in detail the second part studies astrophysical objects in which high energy astrophysics processes are crucial This two pronged approach will help students recognise physical processes by their observational signatures in contexts that may differ widely from those presented here *Magneto-Fluid Dynamics* Paul Lorrain,Francois Lorrain,Stephane Houle,2007-10-31

Magnetohydrodynamics MHD concerns the interaction between magnetic fields and conducting fluids We are concerned here with macroscopic inter actions and when the conducting fluid is a plasma time scales are very much longer than the plasma period Plasma periods vary widely but are short say 10 second We prefer the term Magneto F i Z i Dynamics MFD because the discipline concerns mostly plasmas various liquid conductors and the liquid part of the Earth s core It seems that the only applications of MFD to water are the induction of electric currents in the oceans by the Earth s magnetic field and ship propulsion But even MFD is not quite appropriate because that term also includes solid conductors that move in magnetic fields This book is meant for graduate and upper division undergraduate students in Physics Geophysics and Astrophysics as well as for practicing scientists in these fields This book is no more than a brief introduction to MFD because this vast subject is closely related to many others namely Astrophysics Electrodynamics Fluid Dynamics Geophysics Oceanography Plasma Physics Thermonuclear Fusion etc We sketch the fundamentals and provide many Examples as well as Case Studies related to natural phenomena MFD sorely needs a rethink it must of course be totally compatible with Physics On the contrary it is the custom to discuss the shapes of imaginary magnetic field lines without ever referring to the required electric currents *Library of Congress Subject Headings* Library of Congress,2004
