

The Cell Cycle – How One Cell Becomes Two Cells

This figure gives more information about how one cell becomes two daughter cells.

4. The cell cycle begins with a single cell and produces two daughter cells; each daughter cell can repeat the cell cycle. Circle the cell in the figure that represents both a daughter cell that has been produced by the cell cycle and a cell that is beginning the cell cycle. Explain why the cell is smallest at this time in the cell cycle.

The cell is the smallest at this time because it has not fully grown and developed through the cell cycle.

5a. Use 2x to label the arrow(s) when the amount of DNA doubles.

5b. Use 1/2 to label the arrow(s) when the amount of DNA in the cell is halved.

6. Complete this table to explain why specific phases of the cell cycle are required for successful cell division.

What would go wrong if the cell cycle occurred without the S phase?	Without the S phase, the daughter cells would have half of the amount of chromosomes.
What would go wrong if the cell cycle occurred without mitosis?	If M phase did not occur, then cells would not be very strange as they may not be identical to the parent cell. This is because in this stage the copple of the cell is one side of the cell, and if these mixed while dividing then the cells would not be exact clones.

Cell Cycle Ap Guide:

A Laboratory Guide for Cellular and Molecular Plant Biology I. Negrutiu, Gharti, Chhetri, 2013-03-09 This laboratory guide comes at a time when several other method books have already been published in this field Is this one different from the others Yes and no There was no attempt made to be comprehensive Rather data were brought to bear on areas where enough competence has been gathered in our laboratories and to complement recent method books many of which cover extensively various aspects of molecular biology in those matters which appeared to us somewhat neglected There was a constant preoccupation and effort to provide miniaturized procedures that are both simple and time saving Interest was devoted to standardized procedures and culture conditions avoiding dogmas such as those giving excessive importance to sophisticated culture media with endless adjustments for local or personal considerations The key to success is the quality of the plant material serving as a source of cells Consequently isolation extraction or culture techniques can be simplified and standardized This is symptomatic for our times as it marks the end of a period when methodological matters were frequently above the biological problems The times of methods above all is basically over despite the fact that many of us still believe that say tissue culture is a science per se By presenting a few original techniques we believe that one seriously reduces the empiricism still prevailing in this area of research
