Limbird, 2012-12-06 Cell Surface Receptors A Short Course on Theory and Methods Second Edition is a primer for the study of cell surface receptors The simplified discussion of methods and their underlying principles removes the usual intimidation caused by the specialized vocabulary or sophisticated mathematics that characterize many of the primary papers in this field In this way the basic concepts become emphasized This volume is a starting point a textbook as well as a manual to which the investigator can return for a refresher course when needed

Cell Surface Receptors Lee E. Limbird, 2006-06-02 Cell Surface Receptors A Short Course on Theory and Methods 3rd Edition links theoretical insights into drug receptor interactions described in mathematical models with the experimental strategies to characterize the biological receptor of interest The study of receptors has changed considerably over the period of the publication of the three editions of this book The cloning of several genomes makes it unlikely that preparations of receptors now or in the future will arise from their purification as trace proteins from native tissues but rather from a myriad of molecular approaches Nonetheless understanding the molecular mechanisms and ultimately the in vivo biology of these receptors means that investigators will engage in molecular cellular and ultimate in vivo strategies It should be of value to investigators who want to identify characterize and understand the biology of a receptor of interest

New Trends in Pharmacokinetics Aldo Rescigno, Ajit K. Thakur, 2012-12-06 The last decade or so has witnessed tremendous progress in methodology in the field of drug development in general and pharmacokinetics in particular Clinical pharmacokinetics is using new tools for probing into the black box once being accessible only partly through experimental techniques and mostly through mathematical and computer means Development of computerized scanning positron emission tomography PET stereoselectivity and other techniques are now enabling investigators to have better pictures of the systems they are studying Mathematical models through computer simulation and statistical estimation mostly due to easy access because of inexpensive yet powerful personal computers are enabling us to investigate ultrastructures and their functional connectivity

in more detail As a consequence new hypotheses are being formed and tested in various related fields In clinical pharmacokinetics mostly due to mathematical modeling more accurate interspecies scaling of pharmacokinetic parameters and dosimetry can be done now a days The concept of a human is a bigger rat does not necessarily fly as a consequence Pharmacokinetic concepts are becoming powerful tools in meaningful carcinogenic and toxic risk extrapolation of different chemicals in humans New dose delivery designs are being formulated using pharmacokinetic techniques for different pharmaceutical compounds Investigations continue in the academia research institutions pharmaceutical biotechnological and agricultural industries in developmental and physiological aspects of different chemicals for the benefit of mankind The idea of a school on New Trends in Pharmacokinetics from which the present pUblcation was made possible took shape over almost a year
