Cytokines In Hemopoiesis Oncology And Aids V 1:

Cytokines in Hemopoiesis, Oncology, and AIDS II Mathias Freund, Hartmut Link, Reinhold E. Schmidt, Karl Welte, 2012-12-06 This book is dealing with most recent advances in the field of cytokines in hemopoiesis oncology and AIDS. It covers a wide range from basic research to clinical applications. Overviews on the biological role of cytokines are represented within the book as well as experiments with research on new cytokines and special effects of cytokines. The book will be of interest to hematologists and oncologists as well as immunologists who are engaged in the development of innovative therapy. It gives an overview on the most recent status of the discussion in this field. *Cytokines in Hemopoiesis, Oncology, and AIDS* Mathias Freund, Hartmut Link, Karl Welte, 1990-11-30 Based on a symposium held June 14-17 1989 in Hannover Germany the first of the international symposia on cytokines in hemopoiesis oncology and AIDS. **Acute Leukemias V** Wolfgang Hiddemann, Thomas Büchner, Bernhard Wörmann, J. Ritter, U. Creutzig, William Plunkett, Michael J. Keating, 2013-04-17 150 years after the first description of the clinical picture of white blood and the introduction of the term leukemia by R Virchow it appears that the leukemias and the acute leukemias in particular serve as an impressive example for the major improvements that have been achieved in the treatment but also in the understanding of the biology of malignant disorders. The international symposia Acute Leukemia which are held at Münster since 1986 have developed into an international forum to review the current progress and the future perspectives of leukemia research and therapy at a high scientific and clinical level. Since the possibility for active participation in these symposia is somewhat restricted we are glad to have the opportunity to extend the information that was presented at the symposium Acute Leukemias V. Experimental Approaches and Management of Refractory Disease which was held from February 27 to March 2 1994 to a broader audience of basic scientists and clinicians. This meeting was especially designed to discuss experimental approaches and the management of refractory disease which allows to evaluate new experimental therapies on the basis of preclinical studies. **AIDS Bibliography**, 1993 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1991 **Current Catalog** National Library of Medicine (U.S.), 1993-04 **Acute Leukemias VII** Wolfgang Hiddemann, Thomas Büchner, Bernhard Wörmann, Jörg Ritter, Ursula Creutzig, William Plunkett, 2012-12-06 The 7th volume of the book series Acute Leukemias provides new updates on the biology of acute leukemias and especially the underlying genetic and molecular events. High quality contributions are provided by leading scientists and clinicians making the book an excellent overview over most recent achievements which translate into new treatment strategies and hence an improved outlook for patients suffering from acute leukemias. **Human Basophils and Mast Cells: Biological Aspects** G. Marone, 1995 **Cancer Immunology, Immunotherapy**, 1994 **Recent Advances in Cell Biology of Acute Leukemia** Wolf-Dieter Ludwig, Eckhard Thiel, 2012-12-06 The development of new techniques such as immunophenotyping cytogenetic investigations and more recently molecular studies has considerably increased our diagnostic repertoire and broadened our

ideas about the biology of acute leukemias While immunophenotyping with mono clonal antibodies has yielded increased diagnostic precision and made it possible to develop a highly reproducible classification of acute leukemias based on cell biological features further insights have been gained into the patho genetic mechanisms involved in leukemogenesis by means of cytogenetic detection of acquired structural chromosomal abnormalities Analysis of the leukemia associated chromo somal breakpoints using molecular techniques can now pinpoint many genomic sites essential for normal development and maturation of hematopoietic cells but functionally disrupted in leukemic cells The main goal of the international workshop that we held in Berlin with a select group of scientists and clinicians involved in leukemia research was to describe the state of the art and new developments in the immunologic cytogenetic and molecular characterization of acute leukemias and to discuss the clinical importance of cell biological features After introductory survey lectures dealing with the immunological and molecular biological characteristics of normal vs malignant lymphatic and myeloid progenitor cells the workshop centered on contributions characterizing the immunophenotype and both numerical and structural chromosomal abnormalities in acute leukemias
