

Characteristics of Stars

Imagine you could travel to the stars at the speed of light. To travel from Earth to the sun would take about 8 minutes, not very long for such a long trip! Yet the next nearest star, Proxima Centauri, is much farther away—a trip to Proxima Centauri would take 4.2 years!

Most stars are much farther away than Proxima Centauri. Our sun and Proxima Centauri are only two of the stars that make up the Milky Way. The Milky Way is a giant flat structure, called a [galaxy](#), that contains hundreds of billions of stars. At the speed of light, it would take you 25,000 years to travel the 250 million billion kilometers to the center of our galaxy. If you left our galaxy and traveled at the speed of light for about 2 million years, you would eventually reach another galaxy, the Andromeda Galaxy.

There are billions of galaxies in the [universe](#), which astronomers define as all of space and everything in it. Since galaxies are so far apart, most of the universe is empty space. If our galaxy were the size of a dime, the Andromeda Galaxy, the closest galaxy to the Milky Way would be about half a meter away. The rest of the universe, as far as astronomers can see, would extend for about 2 kilometers in all directions.

Distances to Stars

Distances on Earth are often measured in kilometers. However, as you have seen, distances to stars are so large that the kilometer is not a very practical unit. Instead of kilometers, astronomers use a unit called the light-year. In space, light travels at a speed of 300,000 kilometers per second. A [light-year](#) is the distance that light travels in one year. If you could travel at the speed of light you could go around the Earth 7.5 times in 1 second. Note that the light-year is a unit of distance, not time.

To help you understand what a light-year is, consider an everyday example. If you bicycle at 10 kilometers per hour, it would take you 1 hour to go to a mall 10 kilometers away. You could say that the mall is “1 bicycle-hour” away.

Measuring Distances to Stars

Standing on Earth looking up at the sky, it seems as if there is no way to tell how far away the stars are. However, astronomers have found a way to measure those distances. **Astronomers often use parallax to measure distances to nearby stars.**

The nearest star to the Earth besides the Sun is Proxima Centauri, also known as Alpha Centauri. Scientists claim that this star is about 4 light years away. We need to discuss an important question. How do we know how far away a star is? We cannot stretch a giant tape measure that far, so how can we be sure of how far they are?

To measure distances to stars, scientists use something called parallax. A parallax is the apparent change in position of an object when you look at it from different places. To help you understand how parallax works, let's try an experiment. Stick your arm straight out in front of you with your thumb pointing up. Now close one eye, and then the other. Keep changing which eye is open and which is closed. Notice that as you change your eyes, your thumb seems to move back and forth compared to the background. Now move your thumb so that it is closer to your face. Do the same experiment over again. This time your thumb will seem to move much more back and forth. The closer your thumb is to you, the more it seems to move.

The Role of Language in Content Pedagogy Lay Hoon Seah, Rita Elaine Silver, Mark Charles Baildon, 2022-11-01 This book explores the importance of language in content learning. It focuses on teachers' roles, knowledge, and understanding of language in school contexts, including academic language and disciplinary languages to support students. It examines teachers' language-related knowledge base for content teaching, which includes teachers' knowledge of and about language, knowledge of their students, and their pedagogical knowledge. This book also explores how teachers' knowledge of language, students, and content are linked as part of a larger pedagogical content knowledge, which includes knowledge of the role of language in content learning. As well, it further considers literacy and literacies as part of this examination of teachers' knowledge of language.
