Cell Division Control In Plants Plant Cell Monographs:

Cell Division Control in Plants Desh Pal S. Verma, Zonglie Hong, 2007-11-23 This volume examines the molecular basis of all aspects of cell division and cytokinesis in plants. It features 19 chapters contributed by world experts in the specific research fields providing the most comprehensive and up to date knowledge on cell division control in plants. The editors are veterans in the field of plant molecular biology and highly respected worldwide. *Handbook of Plant and Crop Physiology* Mohammad Pessarakli, 2014-03-21 Continuous discoveries in plant and crop physiology have resulted in an abundance of new information since the publication of the second edition of the Handbook of Plant and Crop Physiology necessitating a new edition to cover the latest advances in the field. Like its predecessors the Third Edition offers a unique complete collection of topics. *Plant Biology* Alison M. Smith, George Coupland, Liam Dolan, Nicholas Harberd, Jonathan Jones, Cathie Martin, Robert Sablowski, Abigail Amey, 2009-04-30 Plant Biology is a new textbook written for upper level undergraduate and graduate students. It is an account of modern plant science reflecting recent advances in genetics and genomics and the excitement they have created. The book begins with a review of what is known about the origins of modern day plants. Next the special features of plant genomes and genetics are explored. Subsequent chapters provide information on our current understanding of plant cell biology, plant metabolism and plant developmental biology with the remaining three chapters outlining the interactions of plants with their environments. The final chapter discusses the relationship of plants with humans, domestication, agriculture and crop breeding. Plant Biology contains over 1 000 full color illustrations and each chapter begins with Learning Objectives and concludes with a Summary. *Biocomplexity of Plant-Fungal Interactions* Darlene Southworth, 2012-04-03 Plants interact with a wide variety of organisms in their natural growing environments. Key amongst these relationships is the interplay between plants and diverse fungal species that impact plants in complex symbiotic, parasitic and pathogenic ways. Biocomplexity of Plant Fungal Interactions explores a broad spectrum of research looking at both positive and negative interactions of these relationships on plants and their ecosystems. Biocomplexity of Plant Fungal Interactions takes a more holistic view of the plant fungal interactions than most traditional volumes on the topic. Focusing on the truly complex biological interplay among plants and fungi as well as other organisms, mammals, insects, bacteria, viruses, this book provides a unique perspective on this fundamentally important relationship. Chapters are written from molecular, evolutionary and ecological perspectives to provide readers with a full understanding of the diverse implications of plant fungal interactions. Written by a global team of experts from varied scientific backgrounds, Biocomplexity of Plant Fungal Interactions will be an essential title for readers looking for a better understanding of the diverse array of interactions between plants and fungi in natural ecosystems. *Plant Microtechniques and Protocols* Edward Chee Tak Yeung, Claudio Stasolla, Michael John Sumner, Bing Quan Huang, 2015-09-19 A proper understanding of the structural organization of the plant body is essential to any study in plant biology. Experimental studies in vivo and in situ will lead to

structural physiological and cellular changes of the experimental material To study macroscopic and microscopic changes different histological methods and microtechniques can be used as they provide valuable information of the experimental system In addition the observed structural changes allow investigators to set hypothesis for further studies based on one's own observation Thus proper selection and utilization of microtechniques are a must for the success of a research program At present an up to date collection of protocols are not readily available in the literature The latest work in plant microtechniques was published in 1999 by Ruzin but many others are no longer in print e g Jensen 1964 O'Brien and McCully 1981 Furthermore a majority of published works focus on techniques related to general processing and staining procedures A comprehensive treatment that encompasses broader applications of microtechniques to other disciplines is lacking e g archeology wood science etc There is a need to create a comprehensive volume of botanical methods and protocols which includes traditional and novel techniques that can be used by researchers in plant science and investigators in other disciplines that require plant microtechniques in their research and teaching This book covers a wide variety of applications and brings them up to date to make them understandable and relevant especially to students using the methods for the first time It is our intention to create a useful reference for plant histology and related methods that will serve as a foundation for plant scholars researchers and teachers in the plant sciences

Progress in Botany Vol. 83 Ulrich Lüttge, Francisco M. Cánovas, María-Carmen Risueño, Christoph Leuschner, Hans Pretzsch, 2022-10-31 With one volume each year this series keeps scientists and advanced students informed of the latest developments and results in all areas of the plant sciences This latest volume includes reviews on plant physiology biochemistry genetics and genomics forests and ecosystems

The Plant Cell Cycle Dirk Inzé, 2011-06-27 In recent years the study of the plant cell cycle has become of major interest not only to scientists working on cell division *sensu strictu* but also to scientists dealing with plant hormones development and environmental effects on growth The book *The Plant Cell Cycle* is a very timely contribution to this exploding field Outstanding contributors reviewed not only knowledge on the most important classes of cell cycle regulators but also summarized the various processes in which cell cycle control plays a pivotal role The central role of the cell cycle makes this book an absolute must for plant molecular biologists

The Cell Division Cycle in Plants: Volume 26, The Cell Division Cycle in Plants J. A. Bryant, D. Francis, Society for Experimental Biology (Great Britain), 1985-05-02 Control points within the cell cycle The organization of replicons Enzymic controls of DNA replication DNA replication in relation to DNA C values Chromatin structure gene expression and the cell cycle Changes in chromatin structure during the cell cycle The cytoskeleton and the cell cycle Growth substances calcium and the regulation of cell division Regulation of the cell division cycle in cultured plant cells Genetic and epigenetic control of the plant cell cycle The control of the cell cycle in relation to floral induction The DNA endoreduplication cycles The chloroplast division cycle and its relationship to the cell division cycle

Plant Growth Signaling Laszlo Bögre, Gerrit Beemster, 2008-05-15 Plant growth is of great economical and intellectual interest Plants are

the basis of our living environment the production of our food and a myriad of plant based natural products Plant bio mass is also becoming an important renewable energy resource Agricultural plant cultivation and breeding programs have altered plant productivity and yield parameters extensively yet the principles and underlying mechanisms are not well understood At the cellular level growth is the result of only two processes cell division and cell expansion but these two processes are controlled by intertwined signaling cascades and regulatory mechanisms forming complex regulatory networks Ultimately this network is what plant scientists are trying to unravel The sequencing of model and agronomically important plant genomes allows complete insight into the molecular components involved in each process Methods to quantify the molecular changes image growth processes and reconstruct growth regulatory networks are rapidly developing This knowledge should help to elucidate key regulators and to design methods to engineer plant architecture and growth parameters for future human needs This volume gives a comprehensive overview of what is known about plant growth regulation and growth restraints due to environmental conditions and should allow readers at all levels an entry into this exiting field of research

Effect of cell growth regulators at molecular level on proliferation and differentiation of meristematic cells of plants Jigna G. Tank, 2024-12-31 Cell differentiation is frequently accompanied by a switch from a mitotic division cycle to an endoreduplication cycle This regulation is studied by inducing endoreduplication in root tips of *Allium cepa* and comparing the changes in expression level of various CDKs genes in normal and endoreduplicated cells How gene networks help cells to exit the cell cycle and differentiate into the mature cells was studied by CDKs gene expression analysis from apical elongation and mature zone of normal and endoreduplicated roots of *Allium cepa* In apical zone of endoreduplicated roots expression of CDKA 1 CDKA 2 and CDKB2 1 remained high because they have role in G1 S and M phase of the cell cycle Since cells were in endoreduplication stage expression of CDKD1 1 and CDKD1 3 was negative They are CDKs activating kinases where CDKD1 1 has role in initiation of cell cycle and CDKD1 3 has role in re entry of cell cycle In elongation zone expression of CDKD1 1 and CDKD1 3 genes was negative in endoreduplicated cells suggested that they have function in initiation of cell cycle and no role in elongation of cells Expression of CDKA 1 and CDKA 2 remained higher in endoreduplicated cells than normal cells because during endoreduplication cells remain in S phase and mitosis cytokinesis and elongation processes are inhibited Since cells were arrested in G2 M phase expression of CDKB2 1 remained high in endoreduplicated cells compared to normal cell Due to endoreduplication cell size was increasing so CDKB2 2 expression was observed in elongation zone as it is involved in organization of meristematic cells Cells of mature zone were re entering in G1 S phase so the expression of CDKA 1 CDKA 2 CDKB2 1 and CDKD1 3 were high Expression of CDKB2 2 and CDKD1 1 was negative because cells of mature zone were organized and cells were re entering G1 S phase So the function of CDKB2 2 and CDKD1 1 is not required Mitosis which was inhibited by colchicine was reinitiated by cytokinin BAP and not by auxin NAA This suggested that exogenous cytokinin initiated cytokinesis process in meristematic cells of root tip It regulated

meristem size in the root by antagonizing auxin signaling in the transition zone the region where cells leave the meristem to differentiate and elongate However NAA was not able to initiate cell division and differentiation processes because high auxin level diverts cell cycle towards endoreduplication and maturation process To prove the above analysis endogenous IAA and zeatin level was measured from normal endoreduplicated and phytohormones treated root tip cells of *Allium cepa* IAA was measured from BAP treated root tips and zeatin was measured from NAA treated root tips to nullify the effect of exogenous NAA and BAP Endogenous IAA and zeatin level determined that the antagonistic cross talk between auxin and cytokinin regulates cell division and endoreduplication processes When endogenous IAA zeatin ratio is high in meristematic cells then cell cycle shifts towards endoreduplication but when it decreases cell cycle shifts towards cell division process
