Component-Based Software Engineering Grace A. Lewis, Iman Poernomo, Christine Hofmeister, 2009-06-18 The 2009 Symposium on Component Based Software Engineering CBSE 2009 was the 12th in a series of successful events that have grown into the main forum for industrial and academic experts to discuss component technology Component based software engineering CBSE has emerged as the underlying technology for the assembly of executable software systems In essence CBSE is about composing computational building blocks to construct larger building blocks that fulfill client needs Most software engineers are involved in some form of component based development Nonetheless the implications of CBSE adoption are wide reaching and its challenges grow in tandem with its uptake continuing to inspire our scientific speculation Component based development necessarily involves elements of software architecture modular software design software verification testing configuration and deployment This year's submissions represent a cross section of CBSE research that touches upon all these aspects The theoretical foundations of component specification composition analysis and verification continue to pose research challenges What exactly constitutes an adequate semantics for communication and composition so that bigger things can be built from smaller things How can formal approaches facilitate predictable assembly through better analysis We have grouped the proceedings into two sub themes that deal with these issues component models and communication and composition At the same time the world is changing
