An Emergence Approach to Speech Acquisition Barbara L. Davis, Lisa M. Bedore, 2013-07-24 The central assertion in this volume is that the young child uses general skills scaffolded by adults to acquire the complex knowledge of sound patterns and the goal directed behaviors for communicating ideas through language and producing speech A child's acquisition of phonology is seen as a product of her physical and social interaction capacities supported by input from adult models about ambient language sound patterns Acquisition of phonological knowledge and behavior is a product of this function oriented complex system No pre existing mental knowledge base is necessary for acquiring phonology in this view Importantly the child's diverse abilities are used for many other functions as well as phonological acquisition Throughout an evaluation is made of the research on patterns of typical development across languages in monolingual and bilingual children and children with speech impairments affecting various aspects of their developing complex system Also considered is the status of available theoretical perspectives on phonological acquisition relative to an emergence proposal and contributions that this perspective could make to more comprehensive modeling of the nature of phonological acquisition as proposed The volume will be of interest to cognitive psychologists linguists and speech pathologists

Anatomic Development of the Vocal Tract Structures as Visualized by Magnetic Resonance Imaging Hourii K. Vorperian, 2000

The Oxford Handbook of Neurolinguistics Greig I. de Zubicaray, Niels O. Schiller, 2019-03-01 Neurolinguistics is a young and highly interdisciplinary field with influences from psycholinguistics

psychology aphasiology and cognitive neuroscience as well as other fields Neurolinguistics like psycholinguistics covers aspects of language processing but unlike psycholinguistics it draws on data from patients with damage to language processing capacities or the use of modern neuroimaging technologies such as fMRI TMS or both The burgeoning interest in neurolinguistics reflects that an understanding of the neural bases of this data can inform more biologically plausible models of the human capacity for language The Oxford Handbook of Neurolinguistics provides concise overviews of this rapidly growing field and engages a broad audience with an interest in the neurobiology of language The chapters do not attempt to provide exhaustive coverage but rather present discussions of prominent questions posed by given topics The volume opens with essential methodological chapters Section I Methods covers the key techniques and technologies used to study the neurobiology of language today with chapters structured along the basic divisions of the field Section II addresses the neurobiology of language acquisition during healthy development and in response to challenges presented by congenital and acquired conditions Section III covers the many facets of our articulate brain or speech language pathology and the capacity for language production written spoken and signed Questions regarding how the brain comprehends meaning including emotions at word and discourse levels are addressed in Section IV Finally Section V reaches into broader territory characterizing and contextualizing the neurobiology of language with respect to more fundamental neuroanatomical mechanisms and general cognitive domains

The Study of Speech Processes Victor J. Boucher, 2021-01-21 By upending traditional perspectives this book gives a biologically grounded understanding of how spoken language conveys meaning

Darwinian Biolinguistics Antonino Pennisi, Alessandra Falzone, 2016-12-15 This book proposes a radically evolutionary approach to biolinguistics that consists in considering human language as a form of species specific intelligence entirely embodied in the corporeal structures of Homo sapiens The book starts with a historical reconstruction of two opposing biolinguistic models the Chomskian Biolinguistic Model CBM and the Darwinian Biolinguistic Model DBM The second part compares the two models and develops into a complete reconsideration of the traditional biolinguistic issues in an evolutionary perspective highlighting their potential influence on the paradigm of biologically oriented cognitive science The third part formulates the philosophical evolutionary and experimental basis of an extended theory of linguistic performativity within a naturalistic

perspective of pragmatics of verbal language The book proposes a model in which the continuity between human and non human primates is linked to the gradual development of the articulatory and neurocerebral structures and to a kind of prelinguistic pragmatics which characterizes the common nature of social learning In contrast grammatical semantic and pragmatic skills that mark the learning of historical natural languages are seen as a rapid acceleration of cultural evolution The book makes clear that this acceleration will not necessarily favour the long term adaptations for Homo sapiens
