Cibse Guide Tm46:

A Guide to Energy Management in Buildings Douglas Harris, 2016-11-29 This new edition of *A Guide to Energy Management in Buildings* begins by asking why we need to control energy use in buildings and proceeds to discuss how the energy consumption of a building can be assessed or estimated through an energy audit. It then details a range of interventions to reduce energy use and outlines methods of assessing the cost effectiveness of such measures. Topics covered include where and how energy is used in buildings, energy audits, measuring and monitoring energy use, techniques for reducing energy use in buildings, legislative issues, and new in this edition, the cooling of buildings, fuel costs, and smart metering and education and professional recognition. It provides a template for instigating the energy management process within an organization as well as guidance on management issues such as employee motivation and gives practical details on how to carry the process through. This book should appeal to building and facilities managers and also to students of energy management modules in FE and HE courses.

Sustainable Construction Processes Steve Goodhew, 2016-04-13 This book explores the concepts and practicalities that lead to sustainable construction. It breaks new ground by providing the reader with the underlying principles of how to build sustainably and then assesses many of the tools required for the task. From energy to materials and from procurement to operation, all aspects play their part in turning a theoretically sustainable building project into a reality. There are many guidelines for the designer on how to maximise the sustainability of buildings, but this resource text supplements these by focusing on the construction and operational aspects of sustainable buildings as well as some of the more fundamental design-related considerations. Offers an excellent text for those learning to construct, design, and operate sustainable buildings. Covers the drivers for sustainable construction, definitions, historical impacts, climate change, and global, regional, and individual responses, enables the construction professional to achieve optimum solutions both in design process and the aftercare of buildings, evaluates the effectiveness of different renewable technologies, and provides guidance on the practicalities of their use. Alerts the reader to future trends in this field.

A Carbon Primer for the Built Environment Simon Foxell, 2014-01-03 In a world increasingly concerned about the impact of carbon dioxide and other greenhouse gases in the atmosphere on global climate, the *A Carbon Primer for the Built Environment* will provide an understanding of the science and the public policy and regulation intended to tackle climate change. It will spell out the essential information needed for navigating through the growing regulatory maze with confidence. The book will provide an explanation of climate change, why carbon has been targeted as the main culprit, and how this will impact the working lives of architects. Explain key concepts such as carbon footprinting, contraction/convergence, concentration-based targets, the Energy Performance of Buildings Directive, decarbonising supply, and reducing energy demand, as well as the relevance of relevant government targets and international agreements. Suggest an overall framework for achieving the carbon reduction targets and the requirements that will place on building designers. Outline requirements

and common standards and codes providing guidance on compliance mechanisms Suggest and examine likely models for future practice The book will be essential reading for anyone wanting to familiarise themselves with the new landscape of carbon reduction in the built environment with a particular focus on building design It will also provide an accessible reference volume for information on particular policies terms and initiatives as well as key data and numbers that will assist initial carbon calculations

Energy, People, Buildings Judit Kimpian, Sofie Pelsmakers, Hattie Hartman, 2021-03-04 Energy performance feedback is an essential tool in addressing the current climate crisis However this is not simply another theoretical text about energy performance in buildings This book is for anyone who wants to better understand how energy is used in buildings and how to drive down operational energy use whether you're an architect student client building services engineer contractor building operator or other stakeholder Focusing on evidence from feedback on buildings in use it explains what it takes to get them to perform as expected as well as the reasons why they often fail Energy People Buildings draws extensively on the findings of studies UK government funded building performance evaluations and on original research into seven case studies from across the UK and abroad that have achieved exemplary energy use through building performance feedback Providing a clear roadmap to understanding aspects that impact building users comfort and satisfaction it also outlines the factors behind energy use and how to track it across the life of a project to ensure that your building performs as intended Case studies include the Everyman Theatre Liverpool Rocky Mountain Institute Innovation Center Colorado and Carrowbreck Meadow Norwich Featured architects AHMM AHR Architype Hamson Barron Smith Haworth Tompkins Henning Larsen Architects and ZGF Architects

A Handbook of Sustainable Building Design and Engineering Dejan Mumovic, Mat Santamouris, 2018-10-30 The second edition of this authoritative textbook equips students with the tools they will need to tackle the challenges of sustainable building design and engineering The book looks at how to design engineer and monitor energy efficient buildings how to adapt buildings to climate change and how to make buildings healthy comfortable and secure New material for this edition includes sections on environmental masterplanning renewable technologies retrofitting passive house design thermal comfort and indoor air quality With chapters and case studies from a range of international interdisciplinary authors the book is essential reading for students and professionals in building engineering environmental design construction and architecture

Building Services Design for Energy Efficient Buildings Paul Tymkow, Savvas Tassou, Maria Kolokotroni, Hussam Jouhara, 2020-07-12 The role and influence of building services engineers are undergoing rapid change and are pivotal to achieving low carbon buildings However textbooks in the field have tended to remain fairly traditional with a detailed focus on the technicalities of heating ventilation and air conditioning HVAC systems often with little wider context This book addresses that need by embracing a contemporary understanding of the urgent challenge to address climate change together with practical approaches to energy efficiency and carbon mitigation for mechanical and electrical systems in a concise manner The essential conceptual design issues for planning the

principal building services systems that influence energy efficiency are examined in detail These are HVAC and electrical systems In addition the following issues are addressed background issues on climate change whole life performance and design collaboration generic strategies for energy efficient low carbon design health and wellbeing and post occupancy evaluation building ventilation air conditioning and HVAC system selection thermal energy generation and distribution systems low energy approaches for thermal control electrical systems data collection controls and monitoring building thermal load assessment building electric power load assessment space planning and design integration with other disciplines In order to deliver buildings that help mitigate climate change impacts a new perspective is required for building services engineers from the initial conceptual design and throughout the design collaboration with other disciplines This book provides a contemporary introduction and guide to this new approach for students and practitioners alike *Faber & Kell's Heating and Air-Conditioning of Buildings* Doug Oughton, Steve Hodgkinson, Richard Brailsford, 2014-11-27 For over 70 years Faber Kell s has been the definitive reference text in its field It provides an understanding of the principles of heating and air conditioning of buildings in a concise manner illustrating practical information with simple easy to use diagrams now in full colour This new look 11th edition has been re organised for ease of use and includes fully updated chapters on sustainability and renewable energy sources as well as information on the new Building Regulations Parts F and L As well as extensive updates to regulations and codes it now includes an introduction that explains the role of the building services engineer in the construction process Its coverage of design calculations advice on using the latest technologies building management systems operation and maintenance makes this an essential reference for all building services professionals

The Building Regulations M. J. Billington, S. P. Barnshaw, K. T. Bright, A. Crooks, 2017-05-01 Since publication of the first edition in 1976 *The Building Regulations Explained and Illustrated* has provided a detailed authoritative highly illustrated and accessible guide to the regulations that must be adhered to when constructing altering or extending a building in England and Wales This latest edition has been fully revised throughout Much of the content has been completely rewritten to cover the substantial changes to the Regulations since publication of the 13th edition to ensure it continues to provide the detailed guidance needed by all those concerned with building work including architects building control officers Approved Inspectors Competent Persons building surveyors engineers contractors and students in the relevant disciplines **Energy**

Positive Neighborhoods and Smart Energy Districts Antonello Monti, Dirk Pesch, Keith Ellis, Pierluigi Mancarella, 2016-09-21 *Energy Positive Neighborhoods and Smart Energy Districts Methods Tools and Experiences from the Field* is a comprehensive guide to this highly interdisciplinary topic Monti et al s combined experience make them the most qualified team of editors to explore the processes and tools involved in creating Energy Positive Neighborhoods and Smart Energy Districts in an urban setting Tools include A complete simulation library to quickly support the implementation of a model of the scenario A set of possible approaches to neighborhood energy optimization An open extensible information

model for neighbourhood asset description The structure of this book offers different reading paths to appeal to the very varied audience it addresses It describes the process of adaption and the challenges faced by the decision makers and also how simulation optimisation ICT approaches and business models are combined in a holistic and pragmatic way It also offers possible business models and a means to quantify them to complete the development process This book is suitable for students on multi disciplinary energy engineering courses energy practitioners ICT vendors aiming to develop new services to target the building industry and decision makers aiming to structure an urban renovation program Delivers a significant amount of exclusive knowledge on the topics of energy positive neighborhoods and smart energy districts Allows readers to grasp the complexity of this interdisciplinary topic by providing access to well structured processes and tools Includes real life examples of the transformation of two demonstration sites that illustrate the concepts discussed to add context and value to their implementation

Better Buildings Richard Partington, Simon Bradbury, 2019-07-25 This book started life as a successor to Sustainable Architecture published in 2007 which set out to prove that sustainable architecture can indeed both lift the spirit as well as save the planet This fully revised edition seeks to take a step further exploring how sustainable buildings are occupied and work and sheds light on the methods used to observe this Through short essays from thought leaders and case studies of visually stunning environmentally ground breaking projects Better Buildings provides architects with the inspiration and tools they need to deliver sustainable design
