

A low-angle, upward-looking photograph of several tall skyscrapers against a clear blue sky. The perspective makes the buildings appear to converge towards the top of the frame, creating a sense of height and scale. The buildings have various architectural details, including windows and structural elements.

Collateral Knowledge Collateral Knowledge:

Collateral Knowledge Annelise Riles, 2011-05 Who are the agents of financial regulation Is good or bad financial governance merely the work of legislators and regulators Here Annelise Riles argues that financial governance is made not just through top down laws and policies but also through the daily use of mundane legal techniques such as collateral by a variety of secondary agents from legal technicians and retail investors to financiers and academics and even computerized trading programs Drawing upon her ten years of ethnographic fieldwork in the Japanese derivatives market Riles explores the uses of collateral in the financial markets as a regulatory device for stabilizing market transactions How collateral operates Riles suggests is paradigmatic of a class of low profile mundane but indispensable activities and practices that are all too often ignored as we think about how markets should work and be governed Riles seeks to democratize our understanding of legal techniques and demonstrate how these day to day private actions can be reformed to produce more effective forms of market regulation

The Knowledge Problems of European Financial Market Integration Troels Krarup, 2023-08-18 Since the creation of the euro and a European Central Bank the European Union has persistently pursued financial market integration throughout periods of economic growth membership enlargements financial breakdown and political crisis While traditionally analysed in terms of clashing ideological orientations and strategic political interests this book presents a novel and empirically grounded perspective on the issues around financial market integration by approaching them in terms of the knowledge problems that actors face Drawing on European legal texts policy documents and interviews with regulators central bankers and financial market professionals this book is rich in empirical detail which reveals a close knit set of knowledge problems or paradoxes of the market These paradoxes are irreducible to a particular political ideology or national interests because they are rooted in the conceptual structure of the European treaties Moreover while these knowledge problems present themselves as uncertainties tensions and conflicts in practice they also echo persistent conceptual and theoretical controversies in the field of economics Indeed this book demonstrates how the market is adopted from economic theory into European treaty law resulting in central bankers and regulators struggling with knowledge problems and conflicts paralleling classic debates in the academic discipline This book will be of significant interest to political economists working on European economic integration and money and finance as well as readers of heterodox economics economic sociology and political and social theory more broadly

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity Reports of cases in the Supreme Court of Nebraska , 1904
