Classic Case

Studies in Psychology Geoff Rolls, 2019-12-06 The human mind is both extraordinary and compelling From the leader who convinced his followers to kill themselves to the man who lost his memory these famous accounts have provided invaluable insights for scholars and researchers and amazed the public at large Brought to life by Rolls each case is contextualized with more typical behaviour while the latest thinking in each subfield is also discussed Revised and updated this new edition features two new case studies including the Jim Twins by Thomas Bouchard an amazing case of twins separated at birth and adopted by different parents yet when reunited 30 years later shared so many behavioural characteristics It also features a new issues and debates chapter Classic Case Studies in Psychology is accessibly written and requires no prior knowledge of psychology just an interest in the human condition The book will amaze sometimes disturb but above all enlighten its readers Geoff Rolls has taught psychology for over 26 years and is currently Head of Psychology at Peter Symonds College Winchester UK He is the author of the popular *Women Can't Park Men Can't Pack* Chambers 2009 which investigates gender stereotypes including driving and also *Taking the Proverbial Chambers* 2007 which explores the psychological truth behind well known proverbs and sayings

Software Engineering with Computational Intelligence Jonathan Lee, 2013-11-11 It is not an exaggeration to view Professor Lee's book *Software Engineering with Computational Intelligence* or SECI for short as a pioneering contribution to software engineering Breaking with the tradition of treating uncertainty imprecision fuzziness and vagueness as issues of peripheral importance SECI moves them much closer to the center of the stage It is obvious though still not widely accepted that this is where these issues should be since the real world is much too complex and much too ill defined to lend itself to categorical analysis in the Cartesian spirit As its title suggests SECI employs the machineries of computational intelligence CI and more or less equivalently soft computing SC to deal with the foundations and principal issues in software engineering Basically CI and SC are consortia of methodologies which collectively provide a body of concepts and techniques for conception design construction and utilization of intelligent systems The principal constituents of CI and SC are fuzzy logic neurocomputing evolutionary computing probabilistic computing chaotic computing and machine learning The leitmotif of CI and SC is that in general better performance can be achieved by employing the constituent methodologies of CI and SC in combination rather than in a stand alone mode In what follows I will take the liberty of focusing my attention on fuzzy logic and fuzzy set theory and on their roles in software engineering But first a couple of points of semantics which are in need of clarification

The Handbook of Social Psychology Gardner Lindzey, 1998 This handbook for social psychologists has been updated to reflect changes in the field since its original publication New topics include emotions self and automaticity and it is structured to show the levels of analysis used by psychologists
