

Lab 4: Combining Forces

Group Members

Objective

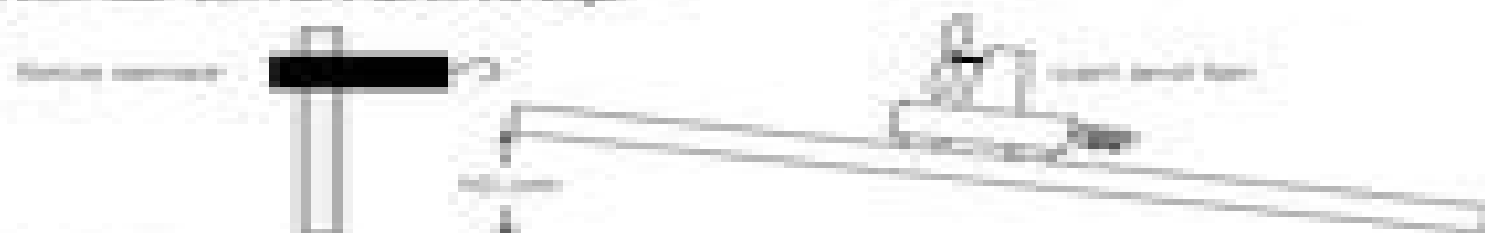

The purpose of this lab is to look at what happens when multiple forces act on an object and how they affect the motion of that object.

Equipment

Force sensor, cart and track with pulley, fan

Activity 1: One Force

Set up the track so that one end is about 10 cm above the other. Mount the force sensor using a force clamp. Mount the fan on top of the cart (check for four batteries that you will need). Release the cart from rest. (Don't let it fall off the edge.)

Questions

1. Released with the fan off, what is the direction of the acceleration? Sketch the acceleration vector in the following diagram. (The dot is the cart. The reference direction for is the direction down the ramp.)

2. Which direction is the fan force?

3. What force is the net force that acts on other objects, what force goes into the sum for the net force? For this entire lab, assume that there is no friction.

Deep Learning in Introductory Physics Mark J. Lattery, 2016-10-01 Deep Learning in Introductory Physics Exploratory Studies of Model Based Reasoning is concerned with the broad question of how students learn physics in a model centered classroom The diverse creative and sometimes unexpected ways students construct models and deal with intellectual conflict provide valuable insights into student learning and cast a new vision for physics teaching This book is the first publication in several years to thoroughly address the coherence versus fragmentation debate in science education and the first to advance and explore the hypothesis that deep science learning is regressive and revolutionary Deep Learning in Introductory Physics also contributes to a growing literature on the use of history and philosophy of science to confront difficult theoretical and practical issues in science teaching and addresses current international concern over the state of science education and appropriate standards for science teaching and learning The book is divided into three parts Part I introduces the framework agenda and educational context of the book An initial study of student modeling raises a number of questions about the nature and goals of physics education Part II presents the results of four exploratory case studies These studies reproduce the results of Part I with a more diverse sample of students under new conditions a public debate peer discussions and group interviews and with new research prompts model building software bridging tasks and elicitation strategies Part III significantly advances the emergent themes of Parts I and II through historical analysis and a review of physics education research

ENDORSEMENTS

In Deep Learning in Introductory Physics Lattery describes his extremely innovative course in which students ideas about motion are elicited evaluated with peers and revised through experiment and discussion The reader can see the students deep engagement in constructive scientific modeling while students deal with counter intuitive ideas about motion that challenged Galileo in many of the same ways Lattery captures students engaging in scientific thinking skills and building difficult conceptual understandings at the same time This is the double outcome that many science educators have been
