Classical Loop In Loop Chains:

Classical Loop-in-Loop Chains J.R. Smith, 2013-04-18 This is not only a book of instruction in chainmaking but it is also a work celebrating man's continuous creativity over thousands of years. At times something that man creates has far reaching effects; an example that quickly comes to mind is the wheel which has enabled many developments from pottery to computers. At this point it is important to note that these same wheels could not have been made without metal tools. From early Neolithic times on gold was a favorite choice in the making of jewelry. During the Neolithic period these shining stones, probably alluvial, were prized. Actually gold was cold worked as if it were a stone. There is a surviving example of cold worked gold from Catalhuyuk, present day Turkey, estimated to have been made in 6500 B.C. There were only four metals on the earth's surface that were found in sufficient quantity to be used: gold, copper, silver, and meteoric iron. An understanding of the malleability of gold and of the annealing effect of fire changed jewelry making; new forms were found. Gold was no longer a piece of stone but a material that could be flattened and made very thin. Sheet and foil are the oldest forms of worked gold. The smith's tools were stone, wood, and horn.

Strategic Planning Models for Reverse and Closed-Loop Supply Chains Kishore K. Pochampally, Satish Nukala, Surendra M. Gupta, 2008-09-22 The rapid technological development of new products coupled with the growing consumer desire for the latest technology has led to a new environmental problem products that are discarded prematurely But behind every problem lies an opportunity Many of these products can be reprocessed leading to savings in natural resources energy landfill s **Sustainable Supply Chains** Yann Bouchery, Charles J. Corbett, Jan C. Fransoo, Tarkan Tan, 2024-04-10 This book is primarily intended to serve as a research based textbook on sustainable supply chains for graduate programs in business management industrial engineering and industrial ecology but should also be of interest to researchers in the broader sustainable supply chain space whether from the operations management and industrial engineering side or more from the industrial ecology and life cycle assessment side As firms become ever more tightly coupled in global supply chains rather than being large and vertically integrated monoliths the risks and opportunities associated with activities upstream or downstream will increasingly affect their own wellbeing For firms to thrive it is increasingly imperative that they be aware of the economic environmental and social dimensions of the supply chains they operate in and that they proactively monitor and manage them Finding effective solutions towards a more sustainable supply chain is increasingly important for managers but raises difficult questions often without clear answers This book provides students and practitioners valuable insights into these kinds of questions based on the latest academic research Chapter Food Loss Food Waste and Sustainability in Food Supply Chains is available open access under a Creative Commons Attribution 4 0 International License via link.springer.com **Jewellery of the Ancient World** Jack Ogden, 1982

Remanufacturing in the Circular Economy Nabil Nasr, 2019-10-15 Economic growth and rising levels of consumption in developing and developed countries has been observed as being deeply coupled with natural resource usage and material consumption The increasing need for natural resources has raised concerns regarding issues such as resource scarcity undesirable environmental impacts due to material extraction primary production and suboptimal product disposal and social or political tensions Product End of Life EoL options such as reusing or recycling attempt to limit or reduce the amount of waste sent to a landfill providing strategic means to decouple the link between economic growth and resource usage These

EoL options have the potential to close material loops further utilizing wastes as resources reducing environmental impacts conserving natural resources reducing material prices and providing job opportunities in developing countries

Remanufacturing on the other hand is a unique EoL option due to increasing the number of life cycles of a product before final disposal First recurring environmental benefits such as emission and raw material extraction avoidance are obtained with each additional product life cycle Second individual resource efficiency yields increase through product remanufacture Resource efficiency or using more with less will continue to compound with each additional life cycle Third recirculating products decreases the demand and dependency for primary resource production further closing the material loop and creating a more circular economy In addition remanufacturing can initiate more preferable EoL options such as recovery recycling and waste reduction While remanufacturing offers numerous benefits there is significant lack of literature and books covering the fundamentals of operations technologies and business models The proposed book will provide in depth coverage of remanufacturing fundamentals and its strong link to circular economy and resource efficiency **Greek Gold**
