Classifying Psychopathology Harold Kincaid, Jacqueline A. Sullivan, 2023-10-31 Scholars question the extent to which current psychiatric classification systems are inadequate for diagnosis treatment and research of mental disorders and offer suggestions for improvement In this volume leading philosophers of psychiatry examine psychiatric classification systems including the Diagnostic and Statistical Manual of Mental Disorders DSM asking whether current systems are sufficient for effective diagnosis treatment and research Doing so they take up the question of whether mental disorders are natural kinds grounded in something in the outside world Psychiatric categories based on natural kinds should group phenomena in such a way that they are subject to the same type of causal explanations and respond similarly to the same type of causal interventions When these categories do not evince such groupings there is reason to revise existing classifications The contributors all question current psychiatric classifications systems and the assumptions on which they are based They differ however as to why and to what extent the categories are inadequate and how to address the problem Topics discussed include taxometric methods for identifying natural kinds the error and bias inherent in DSM categories and the complexities involved in classifying such specific mental disorders as oppositional defiance disorder and pathological gambling Contributors George Graham Nick Haslam Allan Horwitz Harold Kincaid Dominic Murphy Jeffrey Poland Nancy Nyquist Potter Don Ross Dan Stein Jacqueline Sullivan Serife Tekin Peter Zachar

Philosophical Issues in Psychiatry IV

Kenneth S. Kendler, Josef Parnas, 2017-04-06 The revisions of both DSM IV and ICD 10 have again focused the interest of the field of psychiatry and clinical psychology on the issue of nosology This interest has been further heightened by a series of controversies associated with the development of DSM 5 including the fate of proposed revisions of the personality disorders bereavement and the autism spectrum Major debate arose within the DSM process about the criteria for changing criteria leading to the creation of first the Scientific Review Committee and then a series of other oversight committees which weighed in on the final debates on the most controversial proposed additions to DSM 5 providing important influences on the final decisions Contained within these debates were a range of conceptual and philosophical issues Some of these such as the definition of mental disorder or the problems of psychiatric epidemics have been with the field for a long time Others the concept of epistemic iteration as a framework for the introduction of nosologic change are quite new This book reviews issues within psychiatric nosology from clinical historical and particularly philosophical perspectives The book brings together a range of distinguished authors including major psychiatric researchers clinicians historians and especially nosologists including several leaders of the DSM 5 effort and the DSM Steering Committee It also includes contributions from psychologists with a special interest in psychiatric nosology and philosophers with a wide range of orientations The book is organized into four major sections The first explores the nature of psychiatric illness and the way in which it is defined including clinical and psychometric perspectives The second section examines problems in the reification of

psychiatric diagnostic criteria the problem of psychiatric epidemics and the nature and definition of individual symptoms The third section explores the concept of epistemic iteration as a possible governing conceptual framework for the revision efforts for official psychiatric nosologies such as DSM and ICD and the problems of validation of psychiatric diagnoses The book ends by exploring how we might move from the descriptive to the etiologic in psychiatric diagnoses the nature of progress in psychiatric research and the possible benefits of moving to a living document or continuous improvement model for psychiatric nosologic systems The result is a book that captures the dynamic cross disciplinary interactions that characterize the best work in the philosophy of psychiatry

Natural Kinds and Classification in Scientific Practice

Catherine Kendig, 2015-12-22 This edited volume of 13 new essays aims to turn past discussions of natural kinds on their head Instead of presenting a metaphysical view of kinds based largely on an unempirical vantage point it pursues questions of kindness which take the use of kinds and activities of kinding in practice as significant in the articulation of them as kinds The book brings philosophical study of current and historical episodes and case studies from various scientific disciplines to bear on natural kinds as traditionally conceived of within metaphysics Focusing on these practices reveals the different knowledge producing activities of kinding and processes involved in natural kind use generation and discovery Specialists in their field the esteemed group of contributors use diverse empirically responsive approaches to explore the nature of kindness This groundbreaking volume presents detailed case studies that exemplify kinding in use Newly written for this volume each chapter engages with the activities of kinding across a variety of disciplines Chapter topics include the nature of kinds kindness kinding and kind making in linguistics chemical classification neuroscience gene and protein classification colour theory in applied mathematics homology in comparative biology sex and gender identity theory memory research race extended cognition symbolic algebra cartography and geographic information science The volume seeks to open up an as yet unexplored area within the emerging field of philosophy of science in practice and constitutes a valuable addition to the disciplines of philosophy and history of science technology engineering and mathematics

The Routledge Companion to Philosophy of Medicine Miriam Solomon, Jeremy R. Simon, Harold Kincaid, 2016-10-04 The Routledge Companion to Philosophy of Medicine is a comprehensive guide to topics in the fields of epistemology and metaphysics of medicine It examines traditional topics such as the concept of disease causality in medicine the epistemology of the randomized controlled trial the biopsychosocial model explanation clinical judgment and phenomenology of medicine and emerging topics such as philosophy of epidemiology measuring harms the concept of disability nursing perspectives race and gender the metaphysics of Chinese medicine and narrative medicine Each of the 48 chapters is written especially for this volume and with a student audience in mind For pedagogy and clarity each chapter contains an extended example illustrating the ideas discussed This text is intended for use as a reference for students in courses in philosophy of medicine and philosophy of science and pairs well with The Routledge Companion to Bioethics for use in medical humanities and social

science courses *The Bloomsbury Companion to Philosophy of Psychiatry* Serife Tekin, Robyn Bluhm, 2019-01-10 This book explores the central questions and themes lying at the heart of a vibrant area of philosophical inquiry Aligning core issues in psychiatry with traditional philosophical areas it presents a focused overview of the historical and contemporary problems dominating the philosophy of psychiatry Beginning with an introduction to philosophy of psychiatry the book addresses what psychiatry is and distinguishes it from other areas of medical practice other health care professions and psychology With each section of the companion corresponding to a philosophical subject contributors systematically cover relevant topics in philosophy of mind philosophy of science ethics social and political philosophy metaphysics epistemology phenomenology and philosophy of medicine Looking ahead to new research directions chapters address recent issues including the metaphysics of mental disorders gender and race in psychiatry and psychiatric ethics Featuring discussion questions suggestions for further reading and an annotated bibliography *The Bloomsbury Companion to Philosophy of Psychiatry* is an accessible survey of the debates and developments in the field suitable for undergraduates in philosophy and professional philosophers new to philosophy of psychiatry **Extraordinary Science and Psychiatry** Jeffrey Poland, Serife Tekin, 2024-04-30 Leading scholars offer perspectives from the philosophy of science on the crisis in psychiatric research that exploded after the publication of DSM 5 Psychiatry and mental health research is in crisis with tensions between psychiatry's clinical and research aims and controversies over diagnosis treatment and scientific constructs for studying mental disorders At the center of these controversies is the Diagnostic and Statistical Manual of Mental Disorders DSM which especially after the publication of DSM 5 many have found seriously flawed as a guide for research This book addresses the crisis and the associated extraordinary science Thomas Kuhn's term for scientific research during a state of crisis from the perspective of philosophy of science The goal is to help reconcile the competing claims of science and phenomenology within psychiatry and to offer new insights for the philosophy of science The contributors discuss the epistemological origins of the current crisis the nature of evidence in psychiatric research and the National Institute for Mental Health's Research Domain Criteria project They consider particular research practices in psychiatry computational personalized mechanistic and user led and the specific categories of schizophrenia depressive disorder and bipolar disorder Finally they examine the DSM's dubious practice of pathologizing normality Contributors Richard P Bentall John Bickle Robyn Bluhm Rachel Cooper Kelso Cratsley Owen Flanagan Michael Frank George Graham Ginger A Hoffman Harold Kincaid Aaron Kostko Edouard Machery Jeffrey Poland Claire Pouncey Serife Tekin Peter Zachar **Melancholic Habits** Jennifer Radden, 2017 Jennifer Radden finds within Robert Burton's religious and humoral explanations in his *Anatomy of Melancholy* a remarkably coherent account of normal and abnormal psychology with echoes in modern day clinical psychology *Rethinking Cognitive Enhancement* Ruud ter Meulen, Ahmed Mohamed, Wayne Hall, 2017-02-23 There has been much recent excitement amongst neuroscientists and ethicists about the possibility of using drugs as well as other technologies to enhance cognition in healthy individuals This

excitement has arisen from recent advances in neuroscientific technologies such as drugs that increase alertness and wakefulness in healthy individuals or technologies that can stimulate activity in different parts of the brain either via the scalp or via electrodes raising the possibility of producing cognitive and affective improvements in otherwise healthy individuals. Despite this growing interest, there are conflicting views on the ethics of cognitive enhancement. Some argue that enhancement is not only an ethical pursuit but one that we have a moral obligation to pursue. Others are more skeptical about the ethical implications and long-term effects of cognitive enhancement. Some neuroscientists argue that use of stimulants as putative enhancers will lead to misuse, abuse, and addiction in some users and might have undesirable long-term consequences. This book critically explores and analyses the scientific and ethical debates surrounding cognitive enhancers. Including contributions from neuroscientists, neuropsychopharmacologists, ethicists, philosophers, public health professionals, and policy researchers, the book offers a multidisciplinary critical consideration of the ethics of the use of cognitive enhancers.

A Companion to Naturalism David Papineau, David Macarthur, Mario De Caro, Flávia Carvalho Chagas, Clademir Luís Araldi, José Eduardo Porcher, Nythamar de Oliveira, Fabrício Pontin, Felipe Karasek, Adriano Naves de Brito, Sofia Albornoz Stein, Ruth Garret Millikan, Evandro Barbosa, João Hobuss, Susana Nucetelli, Thomas Sukopp, Luís Rosa, Jack Ritchie. Offering a engaging and accessible portrait of the current state of the field, *A Companion to Naturalism* shows students how to think about the relation between Philosophy and Science and why it is both essential and fascinating to do so. All the authors in this collection reconsider the core questions in Philosophical Naturalism in light of the challenges raised in Contemporary Philosophy. They explore how philosophical questions are connected to vigorous current debates including complex questions about metaphysics, semantics, religion, intentionality, pragmatism, reductionism, ontology, metaethics, mind, science, belief, and delusion, among others, showing how these issues and philosopher's attempts to answer them matter in the Philosophy. In this sense, this collection is also compelling and illuminating reading for philosophers, philosophy students, and anyone interested in Naturalism and their place in current discussions.

The Routledge Handbook of Mechanisms and Mechanical Philosophy Stuart Glennan, Phyllis Illari, 2017-07-06. Scientists studying the burning of stars, the evolution of species, DNA, the brain, the economy, and social change all frequently describe their work as searching for mechanisms. Despite this fact, for much of the twentieth century, philosophical discussions of the nature of mechanisms remained outside philosophy of science. *The Routledge Handbook of Mechanisms and Mechanical Philosophy* is an outstanding reference source to the key topics, problems, and debates in this exciting subject and is the first collection of its kind. Comprising over thirty chapters by a team of international contributors, the Handbook is divided into four Parts: Historical perspectives on mechanisms; The nature of mechanisms; Mechanisms and the philosophy of science; Disciplinary perspectives on mechanisms. Within these Parts, central topics and problems are examined, including the rise of mechanical philosophy in the seventeenth century, what mechanisms are made of and how they are organized, mechanisms and laws and regularities, how mechanisms are discovered, and

explained dynamical systems theory and disciplinary perspectives from physics chemistry biology biomedicine ecology neuroscience and the social sciences Essential reading for students and researchers in philosophy of science the Handbook will also be of interest to those in related fields such as metaphysics philosophy of psychology and history of science
