Claus Mattheck:

Design in Nature Claus Mattheck, 2012-12-06 The chicken bone you nibbled yesterday and threw away was a high tech product Not only that it was a superlative light weight design functionally adapted to its mechanical requirements No engineer in the world has as yet been able to copy this structural member which is excellently optimized in its external shape and its internal architecture as regards minimum weight and maximum strength The tree stem on which you recently carved your initials has also by life long care for its body steadily improved its internal and external structure and adapted optimally to new loads In the course of its biomechanical self optimization it will heal up the notch you cut as speedily as possible in order to repair even the smallest weak point which might otherwise cost it its life in the next storm This book is dedicated to the understanding of this biomechanical optimization of shape It is the synthesis of many years of extensive research using the latest computer methods at the Karlsruhe Research Centre to help understand the mechanism of biological self optimization adaptive growth and to simulate it by computer The method newly developed for this purpose was called CAO Computer Aided Optimization With this method it is possible to predict the growth of trees bones and other biological structures from the tiger s claw to the sea urchin s skeleton The Body Language of Trees Claus Mattheck, Helge

Breloer, Great Britain. Department of the Environment, 1994 The potential hazards of trees how and why they break and how they give warning through the silent signs of their body language are graphically described Publisher description **Trees** Gerhard C. Mattheck, 2012-12-06 The beauty of a knotty oak tree is different from that of a lovely flower It is the rough beauty of an old soldier s face showing the traces of wind and sun of harm and of victory bearing the scars of bygone battles It is different from the fragile delicate beauty of a young girl which is evident to anyone at first sight The beauty of an old and crippled tree is hidden unless perceived by the alert eye which is able to fancy or rather discern the hard trials of life the tree has experienced Contemplating trees in this way is not much different from busying oneself with physiognomies i e with the art of judging character from the features of the human face Physiognomies is often considered a dubious science but is practiced every day in human communication by everybody from early childhood to old age Although we all are able to discern the angrily furrowed brow the laughing crow s feet below the eyes the arrogant harsh lines around the nose the hard narrow mouth the gluttonous lip and the secret eye of the silent observer we would never admit to rely on such seemingly doubtful methods
