Clay Lab for Kids Cassie Stephens, 2017-05-01 In *Clay Lab for Kids*, art teacher and winner of the Netflix bake-off show *Nailed It*, Cassie Stephens presents 52 hands-on projects made with kid-friendly clays that get kids working creatively and thinking three dimensionally. Squishy, colorful, and infinitely shapable, clay just might be the most versatile art material for kids. Author, artist, teacher, Cassie Stephens has created all new clay projects for kids of all skill levels. Start with the basics of rolling, coiling, and pinching pots and move up to making Jurassic fossils, animal marionettes, monster magnets, and boxes with secret compartments. All of the projects use kid-friendly, no-kiln clay, air-dry, homemade, and polymer and water-based paints perfect for home and classroom. Plus, there's an entire chapter of recipes for mixing up inexpensive homemade clays in the kitchen. When creating with clay, kids are introduced to a wide range of cognitive and manual skills: they'll work three dimensionally, make figurative models, use their imaginations in making jewelry and toys, design with color, and decorate with paints. The popular *Lab for Kids* series features a growing list of books that share hands-on activities and projects on a wide host of topics, including art, astronomy, bugs, geology, math, and even how to create your own circus, all authored by established experts in their fields. Each lab contains a complete materials list, clear step-by-step photographs of the process, as well as finished samples. The labs can be used as singular projects or as part of a yearlong curriculum of experiential learning. The activities are open-ended, designed to be explored over and over, often with different results. Geared toward being taught or guided by adults, they are enriching for a range of ages and skill levels. Gain firsthand knowledge on your favorite topic with *Lab for Kids*.

Pottery in the Primary School David Cummings, 1972

Young People's Voice in School Science Marianne Logan, 2023-11-27 This book highlights young people's changing attitudes toward and interest in science over the course of a five-year longitudinal study. Utilizing a mixed methods approach, the author presents rich data from children and young people as well as their parents and teachers. By providing a glimpse of science pedagogy from the perspective of young people and those who work with them, the book identifies factors that affect students' interest in science throughout their primary and secondary education. The book also examines a posthumanist philosophical approach to science education and emphasizes the interrelationship of all things within the
