When Singapore became a sovereign state in 1965 the fledgling nation faced very similar problems as most other developing countries high unemployment low standard of living and poor environmental conditions In a scant four decades it has become the 6th wealthiest country in the world in terms of per capita GDP and has managed its environment so well that it is now considered to be one of the best in the world In this remarkable book Tan Yong Soon authoritatively and objectively analyses how the environmental conditions were radically transformed within this period and the enabling conditions which made this

extraordinary transformation possible This book will unquestionably make all Singaporeans proud of their environmental achievements and at the same time enable other countries both developed and developing to learn many lessons from a most remarkable success story This book is a must read for any individual interested in environment development issues Prof Asit K Biswas President Third World Centre for Water Management Mexico and Distinguished Visiting Professor Lee Kuan Yew School of Public Policy Singapore Indiana Pharmacist, 1887 The Future of Decentralized Electricity Distribution Networks Fereidoon Sioshansi, 2023-05-23 The Future of Decentralized Electricity Distribution Networks assesses the evolution of the services delivered by the distribution network as demands placed on it proliferates from distributed self generating power storing and power sharing consumers which Sioshansi terms prosumagers The work outlines the processes by which passive and homogeneous electricity consumers become prosumers and prosumagers the nature of their service needs and dependence on the services delivered by the distribution network diverges Contributors assess how consumers are discovering and exercising options to migrate away from total reliance on upstream generators to produce electricity and on the delivery network for its transmission As they do so the utilities be they distributors or retailers must rethink the traditional utility business model How will they find sufficient revenues to cover their fixed and variable costs as volumetric consumption declines when some consumers become prosumers or go a step further and become prosumagers This work argues that new service business models and new methods for collecting sufficient revenues to maintain the network are mandatory for the survival of modern utilities Examines the future of services demanded by electricity customers as some diverge from their traditional total reliance on the network for delivery of all their service needs Reviews the emergence of new business models to meet the diverging needs of customers Explores the costs imposed by new types of customers on the delivery network and how to collect sufficient revenues from all to maintain it in ways that are efficient equitable and fair
