Rethinking EU VAT for P2P Distribution Cristina Trenta, 2015-09-24 Peer to peer P2P networks decentralized group structures allowing anyone to easily download and share resources online already play a critical role in the distribution of digital content Most of the debate on P2P heretofore has focused on copyright issues However as the basis for legitimate business models a number of companies have already quietly embraced P2P has a largely unknown and underestimated impact on taxation with vast repercussions on the development of mature profitable markets This book analyses the current framing for digital and media supplies provided via P2P technologies through the lens of an interdisciplinary approach drawing on tax law computer science economics copyright law and business studies VAT concepts such as those of economic activity and taxable person taxable transactions consideration barter and taxable amount and territoriality rules are discussed in connection with P2P as is the evaluation of VAT liability for P2P operations in the presence of copyright

Mobile Agents Gian P. Picco, 2003-06-30 Recent years have witnessed the appearance of new paradigms for designing distributed applications where the application components can be relocated dynamically across the hosts of the network This form of code mobility lays the foundation for a new generation of technologies architectures models and applications in which the location at which the code is executed comes under the control of the designer rather than simply being a configuration accident Among the various flavors of mobile code the mobile agent paradigm has become particularly popular Mobile agents are programs able to determine autonomously their own migration to a different host and still retain their code and state or at least a portion thereof Thus distributed computations do not necessarily unfold as a sequence of requests and replies between clients and remote servers rather they encompass one or more visits of one or more mobile agents to the nodes involved Mobile code and mobile agents hold the potential to shape the next generation of technologies and models for distributed computation The first steps of this process are already evident today Web applets provide a case for the least sophisticated form of mobile code Java based distributed middleware makes increasing use of mobile code and the first commercial applications using mobile agents are starting to appear
