Climate Change Mitigation And Agriculture:

Climate Change Mitigation and Agriculture Eva Wollenberg, Marja-Liisa Tapio-Bistrom, Maryanne Grieg-Gran, Alison Nihart, 2013-03-01 This book reviews the state of agricultural climate change mitigation globally with a focus on identifying the feasibility opportunities and challenges for achieving mitigation among smallholder farmers The purpose is ultimately to accelerate efforts towards mitigating land based climate change While much attention has been focused on forestry for its reputed cost effectiveness the agricultural sector contributes about ten to twelve per cent of emissions and has a large technical and economic potential for reducing greenhouse gases The book does not dwell on the science of emissions reduction as this is well covered elsewhere rather it focuses on the design and practical implementation of mitigation activities through changing farming systems Climate Change Mitigation and Agriculture includes chapters about experiences in developed countries such as Canada and Australia where these efforts also have lessons for mitigation options for smallholders in poorer nations as well as industrialising countries such as Brazil and China A wide range of agroecological zones and of aspects or types of farming including livestock crops fish farming fertilizer use and agroforestry as well as economics and finance is included The volume presents a synthesis of current knowledge and research activities on this emerging subject Together the chapters capture an exciting period in the development of land based climate change mitigation as attention is increasingly focused on agriculture s role in contributing to climate change

The Role of Agriculture in Climate Change Mitigation Lucjan Pawlowski, Zygmunt Litwińczuk, Guomo Zhou, 2020-05-07 According to IPCC reports one of the greatest threats to the Earth ecosystems is climate change caused by the anthropogenic emissions of greenhouse gases mostly carbon dioxide mainly from the combustion of fossil fuels cement production and land use change which leads to an excessive temperature rise Agriculture and forestry are responsible for quite big emissions of greenhouse gases CO₂ CH₄ and N₂O and have significant potential to reduce these emissions mainly through enhancement of CO₂ absorption by terrestrial ecosystems To evaluate the impact of agriculture on climate change ruminant farming should be also taken into account These animals emit considerable amounts of methane which has strong greenhouse effects Methane emissions may be reduced by using appropriate feed for ruminants Decreasing the meat consumption of these animals can also make an important contribution to reducing methane emissions The methods for reducing greenhouse gas emissions through appropriate management of terrestrial ecosystems and animal husbandry are widely discussed in The Role of Agriculture in Climate Change Mitigation The book will be of interest to academics professionals and policy makers in environmental sciences

Climate Change and Agriculture Impacts, Adaptation and Mitigation Wreford Anita, Moran Dominic, Adger Neil, 2010-06-17 This report examines the economic and policy issues related to the impacts of climate change on agriculture and adaptation responses and to the mitigation of greenhouse gases from agriculture

Enhancing Climate Change Mitigation Through Agriculture Oecd, 2019-10-16 Agriculture with its growing contribution to global greenhouse gas

emissions and opportunities to mitigate emissions can help close the gap between existing global mitigation efforts and those that are needed to keep global warming to between 1.5°C and 2°C by the end of the century. Global scale and farm scale analyses are used to evaluate both the effectiveness of different policy options to reduce agricultural emissions and the impact on competitiveness, farm income, food security and government finances. In order to contribute to global mitigation efforts, countries will need to design agricultural policy measures that can navigate these trade offs within the context of their national policy priorities and objectives. As most countries have not yet implemented policies to reduce emissions from agriculture, the analyses provided here come at an opportune time to inform this policy development.

Climate Change and Agriculture Impacts, Adaptation and Mitigation Wreford Anita, Moran Dominic, Adger Neil, 2010-06-22 This report examines the economic and policy issues related to the impacts of climate change on agriculture and adaptation responses and to the mitigation of greenhouse gases from agriculture.

Strategizing Agricultural Management for Climate Change Mitigation and Adaptation Suhaib A. Bandh, 2023-07-26 This volume aims to raise awareness and stimulate research on how agricultural management could help to mitigate climate change impacts and focuses on technical progressions and innovations in climate change mitigation and adaptation. It addresses new innovations in agricultural technology and management with the goal of balancing agricultural production and its associated climate effects in a sustainable manner. The major topics covered include crop and soil management techniques and technologies for emission reduction, irrigation, land degradation, pest and disease management, farmers' perspectives and climate smart agriculture policy. The book is geared towards students, researchers and professionals in the fields of environmental science, agriculture science and climate change.

Social and Institutional Barriers to Climate Change Mitigation in Agriculture Hari Bansha Dulal, Gernot Brodnig, 2012 Agriculture is one of the major sources of greenhouse gas (GHG) emissions, accounting for approximately 14 percent of total GHG emissions. However, unlike other sectors such as transport or energy, agriculture is potentially a significant carbon sink. Moreover, because the majority of GHG emissions from agriculture originate in developing countries, early intervention could be highly cost effective. This note examines the potential role of agriculture in

climate change mitigation It discusses 1 the sector's current GHG emissions 2 its potential to serve as a sink 3 best management practices that can be adopted to mitigate climate change and 4 social and institutional barriers to adopting agricultural mitigation measures and ways to overcome them *Combating Climate Change* Manjit S. Kang, Surinder S. Banga, 2013-03-26 The effects of climate change can already be felt around the world and they will likely impact all facets of human civilization from health livelihood security agricultural production and shelter to international trade Since anthropogenic factors are mainly to blame for the current trends in global warming human intervention will be necessary to mitigate it With 17 authoritative chapters *Combating Climate Change An Agricultural Perspective* outlines a framework for preparing agriculture for climate change presenting the causes and consequences of climate change and possible remediation measures With contributions from internationally recognized scientists the chapters cover global food security adaptation of agriculture to fulfill its greenhouse gas emissions mitigation potential economic aspects of climate change the soil organic carbon pool the need for agroecological intelligence and the development of nutrient use efficient crops The text also addresses genetic mitigation of climate change effects through the development of climate resilient crops and the use of genetic and genomic resources to develop highly productive crop cultivars as well as the conservation of native agroecosystems Expert contributors discuss the impacts of climate change on plant pathogens and plant disease as well as on insects and crop losses They address abiotic stress resistance conservation tillage as a mitigation strategy and more The final chapter demonstrates the practical use of the WorldClim and DIVA software for modeling current and future climates using Timor Leste and India as examples Covering a broad range of issues related to climate change and agriculture this book brings together ideas for environmentally friendly technologies and opportunities to further increase and stabilize global agricultural productivity and ensure food security in face of mounting climate challenge **Agriculture and Climate Change** Gerald C. Nelson, 2009-01-01 Agriculture and climate change are inextricably linked Agriculture is part of the climate change problem contributing about 13.5 percent of annual greenhouse gas (GHG) emissions with forestry contributing an additional 19 percent compared with 13.1 percent from transportation Agriculture is however also part of the solution offering promising opportunities for mitigating GHG emissions through carbon sequestration soil and land use management and biomass production Climate change threatens agricultural production through higher and more variable temperatures changes in precipitation patterns and increased occurrences of extreme events such as droughts and floods And if agriculture is not included or not well included in the international climate change negotiations leading up to the 15th Conference of Parties COP15 of the UN Framework Convention on Climate Change in Copenhagen in December 2009 resulting climate change policies could threaten poor farming communities and smallholders in many developing countries The policies could also impede the ability of smallholders to partake in new economic opportunities that might arise from the negotiations
