Climate Code Red The Case For Emergency Action:

Climate Code Red David Spratt, Philip Sutton, 2008-06-30 This meticulously documented call to action reveals extensive scientific evidence that the global warming crisis is far worse than officially indicated and that we are almost at the point of no return. Serious climate change impacts are already happening: large ice sheets are disintegrating, sea level rises will reach 5 metres this century and we are seeing devastating species loss. It is no longer a case of how much more we can safely emit, but whether we can stop emissions and produce a deliberate cooling before the Earth's climate system reaches a point beyond any hope of human restoration. These imperatives are incompatible with politics as usual and business as usual; we face a sustainability emergency that urgently requires a clear break from the politics of failure inducing compromise.

Climate 'code Red' Friends of the Earth, 2008 Reviews evidence and interpretations of Arctic melt, analyses current debates on climate targets and discusses a transition to a post carbon economy. **Climate Action Upsurge** Stuart Rosewarne, James Goodman, Rebecca Pearse, 2013-11-20 In the late 2000s climate action became a defining feature of the international political agenda. Evidence of global warming and accelerating greenhouse gas emissions created a new sense of urgency and despite consensus on the need for action the growing failure of international climate policy engendered new political space for social movements. By 2007 a climate justice movement was surfacing and developing a strong critique of existing official climate policies and engaging in new forms of direct action to assert the need for reduced extraction and burning of fossil fuels. *Climate Action Upsurge* offers an insight into this important period in climate movement politics, drawing on the perspectives of activists who were directly engaged in the mobilisation process. Through the interpretation of these perspectives the book illustrates important lessons for the climate movement today. In developing its examination of the climate action upsurge the book focuses on individual activists involved in direct action: Climate Camps in Australia while drawing comparisons and highlighting links with climate campaigns in other locales. The book should be of interest to scholars and researchers in climate change, environmental sociology, politics, policy and activism.

Opportunities Beyond Carbon John O'Brien, 2009-03-06 *Opportunities Beyond Carbon* presents climate change as potentially the best crisis we ever had. It maps the many opportunities for communities large and small, local and international, making the transition to a low carbon economy. John O'Brien has compiled essays by key politicians, investors, business people, activists and academics on how to make the most of the current predicament. This fresh, lucid and practical optimism for the future offers a foundation for an entirely new and proactive attitude to climate change.

Extreme Weather Tom Streissguth, 2010-11-09 Author Tom Streissguth provides an enthralling look into extreme weather. He examines issues from a variety of expert perspectives, highlighting key future challenges and addressing the pros and cons of potential solutions. Readers will explore the relationship between global climate change and extreme weather, including air and water chemistry, solar radiation, hurricanes and tropical cyclones and heat waves. They will learn about other potential future warming and drought. They will

examine the experience and impact from the Dust Bowl of the 1930s to the current water crisis in California

Emergency Powers in Theory and Practice Michael Head, 2017-05-15 Why have the early years of the 21st century seen increasing use of emergency type powers or claims of supra legal executive authority particularly by the Western countries regarded as the world's leading democracies notably the United States This book examines the extraordinary range of executive and prerogative powers emergency legislation martial law provisos and indemnities in countries with English derived legal systems primarily the UK the US and Australia The author challenges attempts by legal and academic theorists to relativise rationalise legitimise or propose supposedly safe limits for the use of emergency powers especially since the September 2001 terrorist attacks This volume also considers why the reputation of Carl Schmitt the best known champion of exceptional dictatorial powers during the post 1919 Weimer Republic in Germany and who later enthusiastically served and sanctified the Nazi dictatorship is being rehabilitated and examines why his totalitarian doctrines are thought to be of relevance to modern society This diverse book will be of importance to politicians the media the legal profession as well as academics and students of law humanities and politics

Facing the Anthropocene Ian Angus, 2016-07 Science tells us that a new and dangerous stage in planetary evolution has begun the Anthropocene a time of rising temperatures extreme weather rising oceans and mass species extinctions Humanity faces not just more pollution or warmer weather but a crisis of the Earth System If business as usual continues this century will be marked by rapid deterioration of our physical social and economic environment Large parts of Earth will become uninhabitable and civilization itself will be threatened Facing the Anthropocene shows what has caused this planetary emergency and what we must do to meet the challenge Bridging the gap between Earth System science and ecological Marxism Ian Angus examines not only the latest scientific findings about the physical causes and consequences of the Anthropocene transition but also the social and economic trends that underlie the crisis Cogent and compellingly written Facing the Anthropocene offers a unique synthesis of natural and social science that illustrates how capitalism's inexorable drive for growth powered by the rapid burning of fossil fuels that took millions of years to form has driven our world to the brink of disaster Survival in the Anthropocene Angus argues requires radical social change replacing fossil capitalism with a new ecosocialist civilization

Climate Politics And The Climate Movement In Australia Verity Burgmann, Hans Baer, 2012-08-01 Climate change is the hottest topic of the twenty first century and the climate movement a significant global social movement This book examines the broad context of Australian climate politics and the place of the climate movement within it Acting from above are the most powerful forces corporations and governments both Labor and Coalition with the media framing the issues Climate movement actors in the middle include the Australian Greens major environmental and climate organisations think tanks academics public intellectuals and the union movement Acting from below are the numerous local climate action groups and various regional and national networks This lowest level is the primary location of the climate movement and grassroots mobilisation the source of its vitality To advocate

a safe climate and climate justice the book ends by offering a vision for an alternative Australia based upon the principles of social equity and environmental sustainability *Introducing Medical Anthropology* Merrill Singer,Hans Baer,2011-11-04 This new edition introduces students to the growing field of medical anthropology It reviews the basic perspectives and concepts and the latest debates in the field in a more comprehensive fashion than many other comparable works *Human Dependence on Nature* Haydn Washington,2013-05-07 Humanity is dependent on Nature to survive yet our society largely acts as if this is not the case The energy that powers our very cells the nutrients that make up our bodies the ecosystem services that clean our water and air these are all provided by the Nature from which we have evolved and of which we are a part This book examines why we deny or ignore this dependence and what we can do differently to help solve the environmental crisis Written in an accessible and engaging style Haydn Washington provides an excellent overview of humanity s relationship with Nature The book looks at energy flow nutrient cycling ecosystem services ecosystem collapse as well as exploring our psychological and spiritual dependency on nature It also examines anthropocentrism and denial as causes of our unwillingness to respect our inherent dependence on the natural environment The book concludes by bringing these issues together and providing a framework for solutions to the environmental crisis
