Climate Governance At The Crossroads Experimenting With A Global Response After Kyoto:

Climate Governance at the Crossroads Matthew J Hoffmann, 2011-03-16 The global response to climate change has reached a critical juncture Since the 1992 signing of the United Nations Framework Convention on Climate Change the nations of the world have attempted to address climate change through large scale multilateral treaty making These efforts have been heroic but disappointing As evidence for the quickening pace of climate change mounts the treaty making process has sputtered and many are now skeptical about the prospect of an effective global response Yet global treaty making is not the only way that climate change can be addressed or indeed is being addressed In the last decade myriad initiatives have emerged across the globe independently from or only loosely connected to the official UN sponsored negotiations and treaties In the face of stalemate in the formal negotiations the world is experimenting with alternate means of responding to climate change Climate Governance at the Crossroads chronicles these innovations how cities provinces and states citizen groups and corporations around the globe are addressing the causes and symptoms of global warming The center of gravity in the global response to climate change is shifting from the multilateral treaty making process to the diverse activities found beyond the negotiating halls These innovations are pushing the envelope of climate action and demonstrating what is possible and they provide hope that the world will respond effectively to the climate crisis In introducing climate governance experiments and examining the development and functioning of this new world of climate policy making this book provides an exciting new perspective on the politics of climate change and the means to understand and influence how the global response to climate change will unfold in the coming years *Climate Governance at the Crossroads* Matthew J.

Hoffmann, 2011 This volume explains how and why these new governance experiments have emerged drawing upon a database of such initiatives to ascertain how these initiatives fit together and how they influence what is defined as environmental governance **Architectures of Earth System Governance** Frank Biermann, Rakhyun E. Kim, 2020-05-07

An authoritative analysis of a decade of research on institutional architectures in earth system governance covering key elements structures and policy options **Rethinking Urban Transitions** Andrés Luque-Ayala, Simon Marvin, Harriet Bulkeley, 2018-03-15 Rethinking Urban Transitions provides critical insight for societal and policy debates about the potential and limits of low carbon urbanism It draws on over a decade of international research undertaken by scholars across multiple disciplines concerned with analysing and shaping urban sustainability transitions It seeks to open up the possibility of a new generation of urban low carbon transition research which foregrounds the importance of political geographical and developmental context in shaping the possibilities for a low carbon urban future The book's contributions propose an interpretation of urban low carbon transitions as primarily social political and developmental processes Rather than being primarily technical efforts aimed at measuring and mitigating greenhouse gases the low carbon transition requires a shift in the mode and politics of urban development The book argues that moving towards this model requires rethinking what it

means to design practise and mobilize low carbon in the city while also acknowledging the presence of multiple and contested developmental pathways Key to this shift is thinking about transitions not solely as technical infrastructural or systemic shifts but also as a way of thinking about collective futures societal development and governing modes a recognition of the political and contested nature of low carbon urbanism The various contributions provide novel conceptual frameworks as well as empirically rich cases through which we can begin to interrogate the relevance of socio economic political and developmental dimensions in the making or unmaking of low carbon in the city The book draws on a diverse range of examples including world cities and ordinary cities from North America South America Europe Australia Africa India and China to provide evidence that expectations aspirations and plans to undertake purposive socio technical transitions are both emerging and encountering resistance in different urban contexts Rethinking Urban Transitions is an essential text for courses concerned with cities climate change and environmental issues in sociology politics urban studies planning environmental studies geography and the built environment

The Oxford Handbook of U.S. Environmental Policy Sheldon Kamieniecki, Michael Kraft, 2013 Prior to the Nixon administration environmental policy in the United States was rudimentary at best Since then it has evolved into one of the primary concerns of governmental policy from the federal to the local level As scientific expertise on the environment rapidly developed Americans became more aware of the growing environmental crisis that surrounded them Practical solutions for mitigating various aspects of the crisis air pollution water pollution chemical waste dumping strip mining and later global warming became politically popular and the government responded by gradually erecting a vast regulatory apparatus to address the issue Today politicians regard environmental policy as one of the most pressing issues they face The Obama administration has identified the renewable energy sector as a key driver of economic growth and Congress is in the process of passing a bill to reduce global warming that will be one of the most important environmental policy acts in decades The Oxford Handbook of U S Environmental Policy will be a state of the art work on all aspects of environmental policy in America Over the past half century America has been the world s leading emitter of global warming gases However environmental policy is not simply a national issue It is a global issue and the explosive growth of Asian countries like China and India mean that policy will have to be coordinated at the international level The book will therefore focus not only on the U S but on the increasing importance of global policies and issues on American regulatory efforts This is a topic that will only grow in importance in the coming years and this will serve as an authoritative guide to any scholar interested in the issue

A Research Agenda for Global Environmental Politics Peter Dauvergne, Justin Alger, 2018-09-28 In a world confronted with escalating environmental crises are academics asking the right questions and advocating the best solutions This Research Agenda paves the way for new and established scholars in the field identifying the significant gaps in research and emerging issues for future generations in global environmental politics

Routledge Handbook of Global Environmental Politics Paul G. Harris, 2022-03-24 This handbook brings

together leading international academic experts to provide a comprehensive and authoritative survey of global environmental politics Fully revised updated and expanded to 45 chapters the book Describes the history of global environmental politics as a discipline and explains the various theories and perspectives used by scholars and students to understand it Examines the key actors and institutions in global environmental politics explaining the roles of states international organizations regimes international law foreign policy institutions domestic politics corporations and transnational actors Addresses the ideas and themes shaping the practice and study of global environmental politics including sustainability consumption expertise uncertainty security diplomacy North South relations globalization justice ethics public participation and citizenship Assesses the key issues and policies within global environmental politics including energy climate change ozone depletion air pollution acid rain transport persistent organic pollutants hazardous wastes rivers wetlands oceans fisheries marine mammals biodiversity migratory species natural heritage forests desertification food and agriculture This second edition includes new chapters on plastics climate change energy earth system governance and the Anthropocene It is an invaluable resource for students scholars researchers and practitioners of environmental politics environmental studies environmental science geography globalization international relations and political science Chapter 19 of this book is freely available as a downloadable Open Access PDF under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license available at <http://www.taylorfrancis.com>

Public Diplomacy and the Politics of Uncertainty Pawel Surowiec, Ilan Manor, 2020-10-26 This edited book explores the multi layered relationships between public diplomacy and intensified uncertainties stemming from transnational political trends It is the latest wave of political uncertainty that provides the background as well as yields evidence scrutinised by authors contributing to this book The book argues that due to a state of perpetual crises the simultaneity of diplomatic tensions and new digital modalities of power international politics increasingly resembles a networked set of hyper realities Embracing multi polar competition superpowers such as Russia flex their muscles over their neighbours celebrated success stories of democratisation Hungary Poland and Czechia move towards illiberal governance old players of international politics such as Britain and America re claim greatness while other states like China adapt expansionist foreign policy goals The contributors to this book consider the different ways in which transnational political trends and digitalisation breed uncertainty and shape the practice of public diplomacy

The Handbook of Global Climate and Environment Policy Robert Falkner, 2016-09-26 The Handbook of Global Climate and Environment Policy presents an authoritative and comprehensive overview of global policy on climate and the environment It combines the strengths of an interdisciplinary team of experts from around the world to explore current debates and the latest thinking in the search for global environmental solutions Explores the environmental challenges we currently face and the concepts and approaches to solving these Questions the role of global actors institutions and processes and considers the links between global climate and environment policy and that of the global economy Highlights the connections between social science research and

global policy Brings together authoritative coverage of recent research by internationally renowned experts from around the world including from North America Europe and Asia Provides an essential resource guide for students and researchers from across a wide range of related disciplines from politics and international relations to environmental sciences and sociology and for global policy practitioners

Political Theory and Global Climate Action Idil Boran, 2018-10-03 From around the world cities and regions civil society networks and businesses nongovernmental organizations and institutions for research and learning and many others are taking action on climate change The role of these nonstate and substate actors is increasingly being recognized in the new facilitative climate regime Political theory to date has been surprisingly silent about the scale and prospects of these actions for low carbon climate resilient and sustainable transformations Idil Boran argues provocatively for the need for a widened scope of vision one that has a broader public life of climate action at its centre While acknowledging the role of the state and the multilateral process Boran maintains that social transformation is as deeply and more continuously influenced by the engagement of a wide range of actors below and above the state whose actions are often locally anchored and inescapably interwoven across borders Bringing concepts of the public sphere from political theory into contact with leading scholarship on transnational climate governance Political Theory and Global Climate Action launches an exploration sensitive to changing patterns of practice focused on diversity of actors driven to explore historically contingent conditions of possibility and responsive to questions of equity and justice in the context of transformations The result is a repositioning of political thought on climate change engaging political philosophers scholars of politics and governance and drivers of climate action worldwide at nonstate and substate levels interested in the social and political meaning of their engagement
