

HOW DOES CLIMATE CHANGE IMPACT AGRICULTURE?

Climate change causes erratic weather patterns, extreme temperatures and changes in natural resources, threatening farmers' ability to sustainably produce and maintain quality crops.

EXCESSIVE HEAT

Reduces surface water and depletes aquifers
Disrupts flowering and pollination of crops
Increases weed, insect and disease pressures

LOSS OF NATURAL RESOURCES

Removes habitats and food for beneficial insects
Dries up water sources

DROUGHT

Causes crop failures and loss of arable land

EXCESSIVE PRECIPITATION

Increases difficulty of planting
Raises flood risk
Damages crops

NEW PESTS AND DISEASE PRESSURES

More competition for soil and water resources
Greater damage to crops

FLOODING

Removes topsoil
Drowns crops

Climate Change And Agriculture Worldwide:

Climate Change and Agriculture Worldwide Emmanuel Torquebiau, 2015-10-26 In recent years especially with the approach of the 21st Session of the Conference of the Parties to the United Nations Framework Convention on Climate Change in Paris in late 2015 the number of publications conferences and meetings on climate change has been growing exponentially Yet uncertainties remain concerning rural tropical areas where models are forecasting the onset of multiple disorders and trends are unclear Meanwhile the impact of climate change on the poorest communities is regularly documented often prompting alarmist reactions How can food security be achieved while adapting to and mitigating climate change What are the main threats to agriculture in developing countries How do farmers in these countries cope with the threats What does agricultural research propose What options have yet to be investigated A broad scope of scientific research is underway to address these challenges Diverse solutions are available including new agricultural practices water management agricultural waste recycling diagnosis of emerging diseases payment for ecosystem services etc Gaining insight into the financial and political mechanisms that underlie international climate negotiations is also essential to design practical ways to deal with climate issues and meet sustainable development requirements in collaboration with farmers This book pools the wealth of experience of dozens of researchers and development officers from a range of disciplines We have focused on making it detailed accurate and hopefully easy to read for researchers students and all other informed readers

Climate Change and Agriculture Robert O. Mendelsohn, Ariel Dinar, 2009-01-01 The specific focus of this seminal work is on the economic impact of climate change on agriculture world wide and how faced with the resultant environmental alterations agriculture might adapt under varied and varying conditions Enhanced with a detailed and comprehensive index Climate Change and Agriculture is highly recommended for academic library environmental studies and economic studies reference collections and supplemental reading lists The Midwest Book Review Despite its great importance there are surprisingly few economic studies of the impact of climate on agriculture and how agriculture can adapt under a variety of conditions This book examines 22 countries across four continents including both developed and developing economies It provides both a good analytical basis for additional work and solid results for policy debate concerning income distributional effects such as abatement adaptation and equity Agriculture and grazing are a central sector in the livelihood of many people particularly in developing countries This book uses the Ricardian method to examine the impact of climate change on agriculture It also quantifies how farmers adapt to climate The findings suggest that agriculture in developing countries is more sensitive to climate than agriculture in developed countries Rain fed cropland is generally more sensitive to warming than irrigated cropland and cropland is more sensitive than livestock The adaptation to climate change results reveal that farmers make many adjustments including switching crops and livestock species adopting irrigation and moving between livestock and crops The results also reveal that impacts and adaptations vary a great deal across landscapes suggesting that

adaptation policies must be location specific Finally the book suggests a research agenda for the future Economists in academia and the public sector policy analysts and development agencies will find this broad study illuminating *Climate change and agricultural policy options* De Pinto, Alessandro, Wiebe, Keith D., Rosegrant, Mark W., 2016-10-25 Climate change is a significant and growing threat to food security already affecting vulnerable populations in many developing countries and expected to affect ever more people in more places unless action is taken beginning today Current scenarios for business as usual farming under climate change project growing food security challenges by 2050 Worst hit will be underdeveloped regions of the world where food insecurity is already a problem and populations are vulnerable to shocks Rosegrant et al 2014 Improvements in agricultural technology and management are expected to increase food security but if we do not address climate change climate related losses in crop and livestock productivity will reduce those gains Lobell and Gourdji 2012 In this challenging environment countries will need to contend with shifts in which crops they can best produce significant changes in global prices and change in countries comparative advantages New analytical tools that allow policy makers and decision makers to integrate data from the global to the local level offer an important opportunity for countries to identify the most effective ways to address climate change As the 22nd Conference of the Parties COP22 gets underway and the role of agriculture as a key element in reducing emissions is widely recognized countries can use these tools to identify locally appropriate policies that will reduce the impact of climate change on food security over the long term

Agricultural Dimensions of Global Climate Change Harry Kaiser, Thomas Drennen, 1993-09-01 This important book written by recognized leaders in their fields discusses agricultural dimensions of global climate change Research and policy issues are covered and a multidisciplinary view of global climate change and agriculture is presented Major sections cover the contribution of agriculture to greenhouse gas GHG emissions including an investigation as to whether monitoring and verification of such emissions would work and the impact of global climate change on agriculture The book examines such important issues as global food availability distributional effects between developing and developed countries agricultural adaptation possibilities and whether CO2 enrichment will benefit agriculture A unique feature of this publication is that it addresses communication difficulties between researchers and policy makers and suggests solutions Global Climate Change: Resilient and Smart Agriculture V. Venkatramanan, Shachi Shah, Ram Prasad, 2020-09-18 This book provides essential insights into methods and practices of Climate smart Agriculture which is driven by the principles of climate resilience and smart resource use in agricultural production Climate smart agriculture is a key policy instrument for achieving poverty eradication and a hunger free world as well as mitigating the effects of climate change This book discusses in detail climate smart agricultural technologies and practices that can reduce the vulnerability of agricultural systems improve the livelihoods of farmers and other stakeholders and reduce the greenhouse gas emissions from crop production and livestock husbandry The agriculture forestry and other land use AFOLU sector produces roughly 10 12 gigatons of CO2

equivalent per year therefore sustainable practices for agriculture and related land use hold immense potential to mitigate climate change The potential impacts of climate variability and climate change on agriculture are extensively documented and articulated especially with regard to global and national environmental agendas that call for innovation transformation and climate resilient advances in agriculture As the book demonstrates climate smart agriculture offers an excellent tool for boosting agricultural output to feed the growing global population for reducing greenhouse gases emissions from agriculture and other land use and for protecting agricultural production systems from the impending dangers of climate change

Economic Issues In Global Climate Change John M. Reilly, 2019-04-10 This book provides a snapshot on economic thinking about global change and provides a starting point for researchers for evaluating the economics of global change in the context of agriculture forestry and resource issues It attempts to rectify the scarcity of economic analysis in global change
