Climate Change Impact On Livestock Adaptation And Mitigation:

Climate Change Impact on Livestock: Adaptation and Mitigation Veerasamy Sejian, John Gaughan, Lance Baumgard, Cadaba Prasad, 2015-03-31 This volume addresses in detail both livestock's role in climate change and the impacts of climate change on livestock production and reproduction. Apart from these cardinal principles of climate change and livestock production, this volume also examines the various strategies used to mitigate livestock-related GHG emissions and those which can reduce the impacts of climate change on livestock production and reproduction. Presenting information and case studies collected and analyzed by professionals working in diversified ecological zones, the book explores the influence of climate change on livestock production across the globe. The most significant feature of this book is that it addresses in detail the different adaptation strategies and identifies targets for different stakeholders in connection with climate change and livestock production. Further, it puts forward development plans that will allow the livestock industries to cope with current climate changes and strategies that will mitigate the effects by 2025. Lastly, it provides researchers and policymakers several researchable priorities to help develop economically viable solutions for livestock production with less GHG emissions, promoting a cleaner environment in which human beings and livestock can live in harmony without adverse effects on productivity. Given that livestock production systems are sensitive to climate change and at the same time are themselves a contributor to the phenomenon, climate change has the potential to pose an increasingly formidable challenge to the development of the livestock sector. However, there is a dearth of scientific information on adapting livestock production to the changing climate, as such well-founded reference material on sustaining livestock production systems under the changing climate scenarios in different agro-ecological zones of the world is essential. By methodically and extensively addressing all aspects of climate change and livestock production, this volume offers a valuable tool for understanding the hidden intricacies of climatic stress and its influence on livestock production.

Impact of Climate Change on Cattle and Mitigation

Strategies Demissie Jorge, 2022-01-13 Academic Paper from the year 2022 in the subject Agrarian Studies language English abstract This review was focused to assess the current status of climate change impact on production and reproduction performance of Cattle under Global condition. Climate is one of the determining factors for production and reproduction in farm animals throughout the world. Its effect is higher in cattle than in other ruminants. Cattle beef and dairy can be affected by heat stress particularly in feedlot situations or when grazing fescue-infected pastures. Climate change affects both male and female reproductive performance of cattle by altering their physiological process. In contrast to this, cattle are the most contributors for climate change causes than other farm animals. To minimize climate change impacts on animals, cattle climate adaptation and mitigation measures such as diversification of animals within species using different crop varieties and shifting to mixed crop-livestock systems, improving productive and reproductive indexes, reducing age at first calving and calving interval, increasing the longevity of reproductive cows, improving the genetic merit, improving quality

and type of feed and provide ventilation water and shading seem to be the most promising adaptation and mitigation measures **Climate Change Impacts on Nigeria** Johnbosco C. Egbueri,Joshua O. Ighalo,Chaitanya B. Pande,2023-04-19
