Climate Change What Everyone Needs To Know:

Climate Change Joseph J. Romm, 2016 Climate change will have a bigger impact on humanity than the Internet has had This entry in the What Everyone Needs to Know series offers the most up to date examination of climate change s foundational science as well as its implications for our future and its core solutions Alongside detailed but highly accessible descriptions of what is causing climate change this book answers questions about the practical implications of this growing force on our world As the world struggles to stem climate change and its effects everyone will become a part of this story of the century Here is what you need to know *Principles of International Energy Transition Law* Frédéric G.

Sourgens, Leonardo Sempertegui, 2023-10-04 Energy transition is a complex global problem with governance and policies cutting across multiple legal silos including human rights environment international economics finance energy law of the sea and transnational commerce As of yet there is no comprehensive treatment of the legal principles governing energy transition as a whole Furthermore energy transition must solve a trilemma that pits energy equity the need to provide access to energy needed to fuel human development and energy security the need to provide resilient and reliable energy systems against environmental sustainability Without a comprehensive understanding of these issues law and policy makers risk exacerbating rather than resolving the underlying problems *Principles of International Energy Transition Law* introduces the energy transition problem by situating the climate emergency in its broader energy and development context showing how global energy value chains are deeply enmeshed in and drive global economic and human development It combines the different legal perspectives in one consistent analysis by outlining their interactions and showing how they can be reconciled The book discusses thirty two international legal principles governing different aspects of the energy transition trilemma s three parts It then uses a commons governance perspective to propose a holistic approach to applying and balancing these different parts and their different legal principles Highlighted sections summarise the most important concepts and ideas for easy reference making the title particularly accessible for students and policy makers as well as law practitioners **What**

Is Climate Change? Gail Herman, Who HQ, 2018-06-19 Learn more about what climate change means and how it s affecting our planet The earth is definitely getting warmer There s no argument about that but who or what is the cause And why has climate change become a political issue Are humans at fault Is this just a natural development While the vast majority of scientists who study the environment agree that humans play a large part in climate change there is a counterargument Author Gail Herman presents both sides of the debate in this fact based fair minded and well researched book that looks at the subject from many perspectives including scientific social and political **Teaching Climate Change to Adolescents**

The Coming Chaos Ken Casey, 2018-04-13 The Coming Chaos By Ken Casey This book describes the coming chaos that will result in the year 2100 if the world fails to develop a workable nuclear breeder reactor In 2100 the world will be depleted of all but the most expensive oil gas and coal The world will also be largely depleted of the uranium that is used in conventional nuclear reactors The result will be a shutdown of the world electric grid and a shutdown of all vehicular traffic In 2100 the world will have an estimated population of 11 billion people By 2150 the population of the world will plummet to 3 billion people if something is not done soon In order to have a seamless transition into the 22nd century the world must make a concerted effort today to develop nuclear breeder reactors to keep the world electric grid functioning in 2100 The most likely candidate appears to be the Molten Salt breeder reactor also known as the Liquid Fluoride Thorium Reactor With nuclear breeder reactors the world will have electric vehicles at their disposal However for long distance travel the world must continue development of ammonia fueled vehicles The best candidate appears to be a prototype hybrid electric ammonia fueled vehicle that is being promoted by the South Koreans By 2100 the carbon dioxide in the world's atmosphere will increase by over 3 trillion tons This is inevitable without change It will result in temperatures approximately 6 degrees higher 3.5 °C than today Virtually all the glaciers of the world except in the Himalayas will completely melt which will devastate agriculture in the Far East The world's oceans will rise by about 5.9 feet in 2100 which will inundate over 100 million homes and play havoc with the coastal cities of the world All of this can be ameliorated if the world limits the use of fossil fuels in favor of ammonia fuels and switches to the use of nuclear breeder reactors [Framing Climate Change in the EU and US After the Paris Agreement](#) Frank Wendler, 2022-07-01 Political responses to climate change are shaped by beliefs and ideas How does discourse on climate action and its contestation affect policy making Addressing this question the book compares EU and US policy making since the Paris Agreement and its framing by key political institutions The empirical part analyses the structure linkages and contestation of frames to evaluate the contrasting spaces of climate politics in both systems As the first direct comparison of EU and US climate governance since the Paris Agreement the book advances current research on the politics of climate change the politicization of multi level governance and the role of discourse for policy change [Toward a Public Theology of Climate Change](#) Bryan Mok, 2025-10-20 How can theology shape public discourse on climate change This book explores the urgent intersection of climate justice public theology and environmental communication from a Chinese Christian perspective As the world grapples with climate apocalypse this study reveals how religious discourse can influence public opinion and policymaking Engaging with global and Chinese contexts it evaluates competing theological approaches and proposes a framework for a public theology of climate change With insights into environmental activism political deliberation and ethical responsibility this book equips theologians religious scholars and climate activists to rethink the role of religion in the fight against climate change *International Studies* Scott

Straus, Barry Driscoll, 2018-09-10 The challenge of teaching international studies is to help you think coherently about the multiple causes and effects of global problems In *International Studies Global Forces Interactions and Tensions* award winning scholars Scott Straus and Barry Driscoll give you a clear framework that pinpoints how key factors forces interactions and tensions contribute to world events with both global and local consequences The authors first show you how to look for common patterns in global issues by introducing four world shaping forces global markets shifting centers of power information and communications technologies and global governance They systematically trace how these forces prompt interactions among world actors and thus give rise to a set of tensions that spur key challenges The framework enables you to ask and answer for yourself Who is interacting Where did such interactions develop What policies or institutions govern them Why are they getting certain global and local reactions You are then apply the framework to the global problems that matter most to you human rights abuses economic inequality terrorism forced migration pandemics and global health responses climate change food security and more *International Studies* raises the bar for the *Introduction to IS* course moving beyond interdisciplinary and into the realm of critical analysis to increase student relevancy and motivation

CLIMATE CHANGE and the road to NET-ZERO Mathew Hampshire-Waugh, 2021-06-01 *CLIMATE CHANGE and the road to NET ZERO* is a story of how humanity has broken free from the shackles of poverty suffering and war and for the first time in human history grown both population and prosperity It s also a story of how a single species has reconfigured the natural world repurposed the Earth s resources and begun to re engineer the climate The book uses these conflicting narratives to explore the science economics technology and politics of climate change *NET ZERO* blows away the entrenched idea that solving global warming requires a trade off between the economy and environment present and future generations or rich and poor and reveals why a twenty year transition to a zero carbon system is a win win solution for all on planet Earth Reviews Readers Favorite Five Stars An excellent layman s perspective of the climate problem today how it has evolved over time and the different approaches to solving the problem I recommend it highly Mark Z Jacobson Professor of Civil and Environmental Engineering at Stanford University and author of *100% Clean Renewable Energy and Storage for Everything* Mathew brings his wide ranging experience of financial markets particularly in modelling and forecasting to add a unique insight to the climate challenge On one hand helping us understand how fossil fuels drove prosperity and let the world s population escape the poverty trap whilst on the other how rising levels of CO₂ in the atmosphere placed the world at mortal risk In this book Mathew s financial understanding comes to the fore revealing why we need a sound understanding of economics climate science and financial modelling to give us the signals we need to act today Mark Campanale Executive Chairman of the Carbon Tracker Initiative and founder of the unburnable carbon capital markets thesis Provides a clear understanding of the technical complexities of reaching zero carbon Hampshire Waugh approaches the subject with intellectual rigour boundless curiosity and compelling story telling A must read for anyone interested in climate change and

net zero Vincent Gilles Chief Investment Officer at Clim8 Invest The book that says it all and answers all questions Backed by data analysis and science Hampshire Waugh explains how climate change if left unchecked threatens to unravel 200 years of human progress But it need not end this way The author shows that building a net zero carbon economy is within human reach through focused innovation riding down the experience curve and reaching scale in clean energy technologies and solutions Mathew shows how we can solve climate change and air pollution whilst driving development in the poorest parts of the world and without compromise for those already accustomed to the highest quality of life Geetu Sharma Founder of AlphasFuture LLC a sustainability focused investment business About the Author Dr Mathew Hampshire Waugh has spent the last decade working as an equity analyst at a global investment bank He has worked with the top executives of many multi billion dollar companies and built relationships with many of the world s largest investment managers Mathew s work centred on forecasting technology trends financial performance and the intrinsic value of companies involved in markets including renewable energy electric cars battery technology and biofuels Prior to his career in the banking industry the author gained his doctorate in materials chemistry from University College London where he worked on novel coatings and nano materials for use in energy saving glazing and solar panel design During his doctorate Mathew registered a patent for an efficiency enhancing coating for solar modules published numerous scientific papers and engaged in public speaking consultancy and media outreach From the Author I wrote Climate Change and the road to Net Zero to provide a generalist reader with a clear comprehensive and objective take on the issues surrounding climate change and air pollution The book walks the reader through a history of energy innovation and the rise of human civilisation how scientists have come to understand our past climate and can now forecast future change the problems economists encounter as they attempt to piece together the potential monetary and social damages from climate inaction and a technology agnostic assessment of potential climate change solutions from climate engineering to mitigation including their costs risks and limitations The book demonstrates why sustainable technologies such as wind solar and batteries get cheaper with scale of production not time and why a rapid transition to a fully fledged net zero system will end up significantly cheaper than remaining bound to fossil fuels whilst also avoiding the worst impacts of climate change and preventing nearly eight million premature deaths each year from air pollution I hope Climate Change and the road to Net Zero delivers an understanding of humanity s relationship with Earth that is as intriguing as Simon Lewis and Mark Maslin s The Human Planet or Yuval Noah Harari s Sapiens I very much hope too that the book conveys the passion and call to action of David Wallace Well s The Uninhabitable Earth coupled with the sober economic analysis of The Climate Casino by William Nordhaus or Capital in the 21st century by Thomas Piketty and that it provides the technical rigour of Sustainable Energy Without The Hot Air by David MacKay the rationality of Hans Rosling s Factfulness and the eternal hope of The Future We Choose by Christiana Figueres and Tom Rivett Carnac I believe net zero will be cheaper cleaner safer more reliable more sustainable and will create more employment than if we

remain bound to fossil fuels After reading the book I hope you will agree Mathew Hampshire Waugh Author Values in Climate Policy David Morrow, 2019-10-28 Children born today in the Maldives may someday have to abandon their homeland Rising seas caused by climate change could swallow most of their tiny island nation within their lifetime Their fate symbolizes the double inequity at the heart of climate change those who have contributed the least to climate change will suffer the most from it All is not lost however The scale and impact of climate change depends on the policies that people choose How quickly will we eliminate our greenhouse gas emissions How will we do it Who will pay for it What will we protect through adaptation How will we weigh the fortunes of future generations and the natural world against our own Answers to questions like these reflect a constellation of value judgments that deserve close scrutiny In addition to providing essential background on the science economics and politics of climate change this book explores the values at stake in climate policy with the aim of shrinking the gap between climate ethics and climate policy
