Marion, 2013-04-22 This newly corrected highly acclaimed text offers intermediate level juniors and first year graduate students of physics a rigorous treatment of classical electromagnetics The authors present a very accessible macroscopic view of classical electromagnetics that emphasizes integrating electromagnetic theory with physical optics The survey follows the historical development of physics culminating in the use of four vector relativity to fully integrate electricity with magnetism Starting with a brief review of static electricity and magnetism the treatment advances to examinations of multipole fields the equations of Laplace and Poisson dynamic electromagnetism electromagnetic waves reflection and refraction and waveguides Subsequent chapters explore retarded potentials and fields and radiation by charged particles antennas classical electron theory interference and coherence scalar diffraction theory and the Fraunhofer limit Fresnel diffraction and the transition to geometrical optics and relativistic electrodynamics A basic knowledge of vector calculus and Fourier analysis is assumed and several helpful appendices supplement the text An extensive Solutions Manual is also available

Introduction to Special Relativity James H. Smith, 2016-03-22 By the year 1900 most of physics seemed to be encompassed in the two great theories of Newtonian mechanics and Maxwell's theory of electromagnetism Unfortunately there were inconsistencies between the two theories that seemed irreconcilable Although many physicists struggled with the problem it took the genius of Einstein to see that the inconsistencies were concerned not merely with mechanics and electromagnetism but with our most elementary ideas of space and time In the special theory of relativity Einstein resolved these difficulties and profoundly altered our conception of the physical universe Readers looking for a concise well written explanation of one of the most important theories in modern physics need search no further than this lucid undergraduate level text Replete with examples that make it especially suitable for self study the book assumes only a knowledge of algebra Topics include classical relativity and the relativity postulate time dilation the twin paradox momentum and energy particles of zero mass electric and magnetic fields and forces and more
