Thomas Register, 2004 *Thomas Register of American Manufacturers*, 2002 This basic source for identification of U S manufacturers is arranged by product in a large multi volume set Includes Products services Company profiles and Catalog file *Thomas Register of American Manufacturers and Thomas Register Catalog File*, 2002 Vols for 1970 71 includes manufacturers catalogs **Cleanroom Engineering Handbook. Volume 6. Certification Team Practices**, 1993 This is one of a series of six engineering handbooks prepared for and used by the engineering staff at Picatinny Arsenal for the STARS technology transfer demonstration The handbooks define the engineering process and algorithms that will be used in Cleanroom projects They are designed to provide support to trained engineers using Cleanroom Engineering not to substitute for training The Cleanroom process model for software system development projects is presented in Volume 1 Cleanroom Process Overview of this series of Cleanroom Process Manuals This handbook Volume 6 describes the activities of Cleanroom software certification for each increment accumulation of project development Process P5 j 2 Preparation for Certification of Accumulation j and process P6 j Software Certification for Accumulation j are expanded into engineering subprocesses i e tasks for execution by Cleanroom trained software engineers These tasks result in the preparation for and performance of the certification of developed software The reader of this volume should be familiar with the information and terms described in Volume 4 Specification Team Practices This handbook Volume 6 builds on the theory involving software usage modeling which is introduced in Volume 4 Certification Cleanroom Cleanroom engineering Development Management Software development Specification **Cleanroom Pamphlet**, 1995 Cleanroom software engineering is a theory based team oriented process for on schedule development and certification of ultrahigh reliability software systems with improved productivity under statistical quality control The Cleanroom name is borrowed from hardware Cleanrooms with their emphasis on prevention of errors through engineering discipline rather than error removal Cleanroom combines rigorous methods of software specification design correctness verification and statistical quality certification in a new life cycle model based on incremental development You can use the Cleanroom process and supporting technologies to develop software systems that approach zero defects and have scientifically certified reliability for operational field use In contrast to traditional development approaches in the Cleanroom process you embed software development and testing within a formal statistical quality control process In such a process software engineering is required to create software that approaches zero defects and can enter system testing directly Then statistical usage based testing is used to provide statistical inferences about the reliability of the software This systematic process of assessing and controlling software quality during development permits you to certify product reliability at delivery based on a complete public record of the testing and all engineering change activity required to deliver acceptable software The significance of a process under statistical quality control is well illustrated by modem manufacturing techniques where the sampling of output is directly fed back into the process to control

quality Once the discipline of statistical quality control is in place management has objective visibility into the software development process and can control process changes to control product quality

The Cleanroom Case Study in the Software Engineering Laboratory: Project Description and Early Analysis National Aeronautics and Space Administration, 2018-11-06 This case study analyzes the application of the cleanroom software development methodology to the development of production software at the NASA Goddard Space Flight Center The cleanroom methodology emphasizes human discipline in program verification to produce reliable software products that are right the first time Preliminary analysis of the cleanroom case study shows that the method can be applied successfully in the FDD environment and may increase staff productivity and product quality Compared to typical Software Engineering Laboratory SEL activities there is evidence of lower failure rates a more complete and consistent set of inline code documentation a different distribution of phase effort activity and a different growth profile in terms of lines of code developed The major goals of the study were to

- 1 assess the process used in the SEL cleanroom model with respect to team structure team activities and effort distribution
- 2 analyze the products of the SEL cleanroom model and determine the impact on measures of interest including reliability productivity overall life cycle cost and software quality and
- 3 analyze the residual products in the application of the SEL cleanroom model such as fault distribution error characteristics system growth and computer usage
