Climate Change Adaptation Manual Andrea Prutsch, Torsten Grothmann, Sabine McCallum, Inke Schauser, Rob Swart, 2014-02-24 Due to the lack of success in climate change mitigation efforts the importance of adaptation is becoming more and more apparent and is now one of the main imperatives of international research and action However research on adaptation is mostly not directly applicable to adaptation policy or practice leaving a gap between scientific results and practical advice for decision makers and planners This book seeks to address this problem and bridge the gap and should provide readers with practical and applicable information on climate change adaptation Following an introduction the book is organised into four main sections each reflecting an essential component in the adaptation process Climate change adaptation is an emerging subject area and has gained increased political and academic attention within the last decade Whereas most books in the field focus on adaptation in developing countries this volume provides an examination of predominantly European policy and offers inter disciplinary insight into cutting edge knowledge and lessons learnt in a relatively new field of implementation

Climate Change Adaptation Lisa Dale, 2022-07-05 Climate change policy has typically emphasized mitigation calling for reducing emissions and shifting away from fossil fuels Yet while these efforts have floundered floods wildfires droughts and other disasters are becoming more frequent and potent As the risks escalate we must ask how to adapt to a changing climate How might farmers modify their practices to maximize food security Can coastal cities protect their infrastructure from rising seas Are there strategic ways for developing countries to combine climate resilience with economic growth and poverty reduction For people and societies around the world these questions are not theoretical adaptation is already underway This book offers a concise overview of climate adaptation governance In clear accessible language Lisa Dale describes key strategies that governments communities and the private sector are now deploying She presents the theory and practice that underlie climate adaptation

efforts at local and global scales providing illuminating case studies that foreground the problems facing developing countries Dale analyzes the effectiveness of a range of policy interventions drawing out principles of good governance and discussing how practitioners can navigate complex tradeoffs She emphasizes equity and inclusion considering how climate adaptation policy can account for the needs of historically disadvantaged groups Written for a wide audience this book is an invaluable introduction for all readers interested in how societies can meet the challenges of an altered climate

Neste livro, o autor contextualiza a temática das alterações climáticas e elevação do nível do mar ENM, sistematizando o conhecimento actualmente disponível sobre as suas causas, impactos, riscos e medidas de adaptação da zona costeira. Por outro lado, utiliza vários estudos de caso na zona costeira da Guiné-Bissau para mostrar de forma prática e real como as comunidades costeiras estão ou estarão sujeitas ao risco de erosão e inundação costeira e para identificar, descrever e priorizar uma gama de medidas de adaptação adequadas para a condição presente e cenários futuros de ENM. Ainda realça a importância de uso de métodos participativos envolvendo stakeholders na tomada de decisão de adaptação, mas também a necessidade de integrar a adaptação às alterações climáticas com todos os objectivos de desenvolvimento sustentável.
