Immigration Control in a Warming World Johannes Graf Keyserlingk, 2018-08-07 In the course of the twenty first century climate change is projected to significantly increase the already weighty immigration pressures that rich countries in Europe and North America face Estimates vary greatly from 50 to 500 million further migrants until 2050 most of them from developing countries that have contributed little to global warming Meanwhile the willingness of citizens in destination countries to let further foreigners immigrate is unlikely to keep pace with that increase In fact the concern with climate migration is a blurry intricate and pressing one that will turn out to challenge current political and philosophical frameworks It is a blurry one because it will often be impossible to tell whether or to what extent it really was the changing climate that triggered a particular migratory flow rather than say economic social or demographic factors that often interact with the climatic trigger It is an intricate one because although it appears that heavily emitting countries have a particularly strong responsibility toward climate migrants there is little doubt that in times of rising anti immigrant sentiment that moral responsibility cannot be addressed by simply calling for more open borders And it is a pressing one because this latter insight neither absolves us from our obligations toward climate migrants nor will it keep them from moving Immigration Control in a Warming World aims to address these concerns and discusses potential future solutions to the issue of climate migration That such morally appropriate solutions are hardly in sight in today's practice of international politics is a poignant realization and it serves as a starting point for this book's trenchant critique of political inaction and of some philosophical commentators more idealistic perspectives on migration in the 21st Century

People on the Move in a Changing Climate Etienne Piguet, Frank Laczko, 2013-10-17 Policymakers around the world are increasingly concerned about the likely impact of climate change and environmental degradation on the movement of people This book takes a hard look at the existing evidence available to policymakers in different regions of the world How much do we really know about the impact of environmental change on migration How will different regions of the world be affected in the future Is there evidence to show that migration can help countries adapt to environmental change What types of research have been conducted how reliable is the evidence These are some of the questions considered in this book which presents for the first time a synthesis of relevant research findings for each major region of the world Written by regional experts the

book provides a comprehensive overview of the key findings of existing studies on the linkages between environmental change and the movement of people More and more reports on migration and the environment are being published but the information is often scattered between countries and within regions and it is not always clear how much of this information is based on solid research This book brings this evidence together for the first time highlighting innovative studies and research gaps In doing this the book seeks to help decision makers draw lessons from existing studies and to identify priorities for further research

Managing Climate Change Adaptation in the Pacific Region Walter Leal Filho,2020-03-03 This book presents papers written by scholars practitioners and members of social movements and government agencies pursuing research and or climate change projects in the Pacific region Climate change is impacting the Pacific in various ways including numerous negative effects on the natural environment and biodiversity As such a better understanding of how climate change affects Pacific communities is required in order to identify processes methods and tools that can help countries and the communities in the region to adapt and become more resilient Further the book showcases successful examples of how to cope with the social economic and political problems posed by climate change in the region
