Climate Change Adaptation in Practice Philipp Schmidt-Thome, Johannes Klein, 2013-04-17 Climate change adaptation is increasingly recognized as complementary part to climate change mitigation Climate change affects sea level the extent of flood prone areas and precipitation patterns among many others To adapt to these changes the tasks of municipalities and cities are to implement policies and strategies for changes in land use and coastal management as part of their future development It is of vital importance to address the uncertainties of climate change scenarios when proposing adaptation measures that are socially viable and economically reasonable The decision making process promoted here is based on scientific excellence as well on an integrated communication process This book provides a comprehensive overview of key elements required for effective analysis and assessment of climate change impacts economic cost benefit analysis communication processes and creation and transfer of knowledge governance issues and implementation of related policies It describes the results achieved by the BaltCICA www.baltcica.org project whose contributors come from the scientific and public administration communities The

regional cooperation has led to the implementation of climate change adaptation in several case studies The BaltCICA project developed concepts methodologies and tools for climate change adaptation that can be translated across other global regions Scientists and students working on the development of climate change and adaptation strategies public administrators in the related fields on local regional and state level including environment water management civil defense as well as professionals working with adaptation technologies including engineering technological solutions urban planning agencies and construction will value this innovative book

Connecting Delta Cities Jeroen Aerts, Malcolm J. Bowman, 2009 At present more than 50% of the entire world population lives in cities According to the United Nations more than two thirds of the world's large cities are vulnerable to rising sea levels exposing millions of people to the risk of extreme floods and storms Within the coming 30 years the United Nations project that the number of people living in cities will increase to 60% of the world's population resulting in even more people living in highly exposed areas Both scientists and policy makers have addressed the issue of adapting to the challenge of climate change and both call for embedding long term scenarios in city planning and investments in all sectors Based on estimations of costs of estimations it appears that investing in adaptation now would save money in the long term This book shows the different aspects of climate adaptation It is an independent investigation of comparative adaptation problems and progress in the cities of Rotterdam New York and Jakarta In this regard each city faces different challenges one of the lessons of the Connecting Delta Cities initiative is that while cities will follow adaptation paths that may differ sometimes substantially each city can learn from the others

Climate Change Risks and Adaptation Linking Policy and Economics OECD, 2015-07-07 Building on the experience of OECD countries this report sets out how the latest economic evidence and tools can enable better policy making for adaptation

Coastal Environments and Global Change Gerd Masselink, Roland Gehrels, 2014-04-23 The coastal zone is one of the most dynamic environments on our planet and is much affected by global change especially sea level rise Coastal environments harbour valuable ecosystems but they are also hugely important from a societal point of view This book which draws on the expertise of 21 leading international coastal scientists represents an up to date account of coastal environments and past present and future impacts of global change The first chapter of the book outlines key principles that underpin coastal systems and their behaviour This is followed by a discussion of key processes including sea level change sedimentation storms waves and tides that drive coastal change The main part of the book consists of a discussion of the main coastal environments beaches dunes barriers salt marshes tidal flats estuaries coral reefs deltas rocky and glaciated coasts and coastal groundwater and how these are affected by global change The final chapter highlights strategies for coping with coastal change Readership final year undergraduate and postgraduate level students on coastal courses in a wide range subjects including geography environmental management geology oceanography and coastal civil engineering The book will also be a valuable resource for researchers and applied scientists dealing with coastal environments Additional resources for this book can be found at www
