Climate Change Denial Heads In The Sand:

Climate Change Denial Haydn Washington, John Cook, 2010 First Published in 2011 Routledge is an imprint of Taylor Francis an informa company Climate Politics in Populist Times Mirjam Gruber, 2024-10-08 This book navigates the neglected territory where far right populism intersects with climate change presenting a nuanced examination that transcends traditional research boundaries In recent decades Europe has grappled with the surge of far right and populist movements fueling robust academic debates Simultaneously the global discourse on climate change has become increasingly pervasive in societal and political spheres This book provides a comprehensive exploration of how populist far right parties discuss climate change within their national contexts focusing on Germany Spain and Austria Using a meticulous methodology rooted in critical discourse studies Mirjam Gruber examines the perspectives on climate change held by mainstream parties thereby defining the national policy field Gruber then delves into the discourse about climate change of populist far right parties revealing a complex web of obstructionist arguments intricately tied to the national policy context By analyzing a diverse array of documents spanning five years including social media posts press releases parliamentary debates and policy documents Gruber uncovers a stark contrast between the willingness of mainstream parties to address climate concerns and the obstructionist rhetoric employed by their far right counterparts This illuminating exploration underscores the importance of context in understanding political communication and provides profound insights into how different nations frame the climate change narrative *Climate Politics in Populist Times* will be of great interest to students and scholars of climate change environmental politics climate change communication and populist far right ideologies

Climate Change and Social Ecology Stephen M. Wheeler, 2012 Industrial cultures have proved unable to confront the issues underlying the climate problem such as overconsumption overpopulation inequity and dysfunctional political systems Political and social obstacles have prevented the adoption of improved technologies and these would provide only a partial solution in any case *Climate Change and Social Ecology* takes a new approach to the climate crisis arguing that climate change is a challenge of rapid social evolution In order to address this impending catastrophe and bring about more sustainable development this book argues that we must focus on improving social ecologies our values mind sets and organizations The text presents a compelling vision of how to help social ecologies evolve toward sustainability and explores the social transformations needed to deal with the climate crisis in the long term It reviews the climate change strategies considered to date presents a detailed vision of a future sustainable society and analyzes how this vision might be realized through more conscious public nurturing of our social ecologies This interdisciplinary volume provides a compelling rethink of the climate crisis Authoritative and accessible it will be of great interest to anyone concerned about climate change and sustainability challenges and is essential reading for students professionals and general readers alike *Handbook of the Philosophy of Climate Change* Gianfranco Pellegrino, Marcello Di Paola, 2023-11-24 This Handbook offers a broad yet unified

treatment of many philosophical issues connected with climate change ranging from foundational puzzles to detailed applications. It extends to many branches of philosophy that are relevant to the understanding of the premises and implications of the impacts of climate change on human and nonhuman life on Earth. More specifically, the handbook examines the scientific accounts of climate change as well as its causes. It explores the tools offered by social sciences and humanities to study the societal premises and impacts of climate change as well as delving deeper into the ethical and political issues connected with and resulting from climate change. By doing so, it puts it all in an ecological and historical context. In addition, the book offers solutions to some important philosophical puzzles and problems and indicates paths of interaction between philosophy and other disciplines. The discussion about climate change and the mitigation/adaptation policies spans many areas and levels from abstract science and philosophy to current on-the-ground politics. However, climate change is also a great philosophical puzzle. Indeed, its existential and practical relevance can be thought to largely derive from the philosophical complications it engenders. Climate change is applied philosophy par excellence. Preventing dangerous anthropogenic climate change needs very good philosophy applied to concrete and specific practical issues. Climate change is an area where scholars from very different provenances should cooperate on equal terms, having in view a common and really important purpose: contribute to preventing great burdens and even the extinction of humankind and the destruction of hospitable and valuable non-human nature.

Business and Populism Magnus Feldmann, Glenn Morgan, 2023. This book analyses the relationship between right-wing populism and business. There is little known about the effects a worldwide populist shift has had on business beyond the restriction of globalism and outsourcing while embracing capitalism and deregulation. How does business respond to populism? What impact will it have?

Strategies for Rapid Climate Mitigation Laurence Delina, 2016-06-10. To keep the global average temperature from rising further than 2°C, emissions must peak soon and then fall steeply. This book examines how such rapid mitigation can proceed in the scale and speed required for effective climate action using an analogy provided by the mobilisation for a war that encompassed nations: the Second World War. *Strategies for Rapid Climate Mitigation* examines the wartime climate analogy by drawing lessons from wartime mobilisations to develop contingency plans for a scenario where governments implement stringent mitigation programs as an insurance policy where we pay for future benefits. Readers are provided a picture of how these programs could look, how they would work, what could trigger them, and the challenges in execution. The book analyses in detail one plausible approach to a crucial issue: an approach built upon knowledge of climate science and on proven and demonstrated mitigation measures. The book is meshed with a social and political analysis that draws upon narratives of mobilisations during the war to meet a transnational threat while also addressing the shortcomings of the analogy and its strategies. The book will be of great interest to scholars, students, and practitioners of public policy, climate policy, energy policy, international relations, and strategic studies.

What Can I Do to Help Heal the Environmental Crisis? Haydn Washington, 2019-10-01. The culmination

of over three decades of writing by environmental scientist and writer Haydn Washington this book examines the global environmental crisis and its solutions Many of us know that something is wrong with our world that it is wounded At the same time we often don't know why things have gone wrong or what can be done Framing the discussion around three central predicaments the ecological the social and the economic Washington provides background as to why each of these are in crisis and presents steps that individuals can personally take to heal the world Urging the reader to accept the reality of our problems he explores practical solutions for change such as the transition to renewable energy rejection of climate denial and the championing of appropriate technology as well as a readjustment in ethical approaches The book also contains 19 solution boxes by distinguished environmental scholars With a focus on positive personal solutions this book is an essential read for students and scholars of environmental science and environmental philosophy and for all those keen to heal the world and contribute towards a sustainable future

Climate Change in the Mediterranean and Middle Eastern Region Walter Leal Filho, Evangelos Manolas, 2022-01-01 This book serves the purpose of showcasing some of the works in respect of applied research field projects and best practice to foster climate change adaptation across the region Climate change is having a much greater impact in the Mediterranean than the global average In the Paris Climate Agreement the UN member states pledged to stop global warming at well below two degrees if possible at 1.5 degrees This mark which is expected elsewhere only for 2030 to 2050 has already been reached in the region The situation could worsen in the coming years if the global community does not limit its emissions The above state of affairs illustrates the need for a better and more holistic understanding of how climate change affects countries in the Mediterranean region on the one hand but also on the many problems it faces on the other which prevent adaptation efforts There is also a perceived need to showcase successful examples of how to duly address and manage the many social economic and political problems posed by climate change in the region in order to replicate and even upscale the successful approaches used It is against this background that the book *Climate Change in the Mediterranean and Middle Eastern Region* has been produced It contains papers prepared by scholars practitioners and members of governmental agencies undertaking research and or executing climate change projects and working across the region
