Combine Software:

Design of a Portfolio Management System for Software Line Development: Merging the Gap between Software Project and Product Management Michael Lang, 2015-01-01 Tracy 1995 p 19 emphasises in his book that in the twenty first century tomorrow will be more different from today than in the past Therefore today s corporations get to stay innovative reinvent themselves continuously and have to design new business In contrast to that software mastery becomes more than ever the key factor for business success Northrop 2008 p 12 In the twenty first century software pervades every sector and has become the bottom line for many organisations Therefore reusability plays a growing role for every business in today s rapid changing world Strahringer 2003 p 5 Thus new paradigms in software engineering are focusing on the reutilisation and modularisation of software solutions One innovative and growing concept since 2003 is software line development which has its origin in the automotive and fashion industry Strahringer 2003 p 5 The key benefit of software line development is the covering of a wide field of application with minimal extra costs by reuse of a common software platform In reference to Ebert Smouts 2003 p 29 the most publications in the field of software lines deal with configuration and change management Whereas the integration of software line development into enterprises product portfolios has been till now widely neglected In contrast to that Jeffery Leliveld 2004 points out that the failure or success of software lines highly depends in particular on their level of integration into companies product portfolio system For this reason the major goal of this research is the realisation of an integrated portfolio management system for software line development This covers at first the determination of the role portfolio management in organisational governance Thereafter the general elements of a portfolio management system will be identified On the other side the specific demands of software line engineering according to the portfolio elements will be analysed The insights of the analysis build the basis for the design of the software product line portfolio management system The design describes the portfolio management system from different architectural perspectives which represent the viewpoint of the diverse stakeholders Moreover different analysis methods will be evaluated with a respective scoring model for the software line product domain and asset application domain At the end the scientific work gives a suggestion for further investigations in Constructing Correct Software John Cooke, 2013-06-29 Constructing Correct Software The Basics illustrates and explains the constructive approach to software development This approach involves calculating an answer from the initial statement of requirements or specification rather than guessing an answer and then testing whether it actually works It uses the same basic theory as traditional techniques but is much quicker and easier as no wrong answers are obtained and therefore no incorrect work needs to be discarded John Cooke has based this book on material which has been used to teach the topic extensively at Loughborough University It has been carefully written to be accessible to anyone with an appropriate basic background knowledge of formal methods It is intended for 3rd 4th year undergraduate and postgraduate students on formal methods and software engineering courses and software developers in

industry who need a more pragmatic yet fully formal approach to software development *Software and Mind* Andrei Sorin, 2013-01-01 Addressing general readers as well as software practitioners *Software and Mind* discusses the fallacies of the mechanistic ideology and the degradation of minds caused by these fallacies Mechanism holds that every aspect of the world can be represented as a simple hierarchical structure of entities But while useful in fields like mathematics and manufacturing this idea is generally worthless because most aspects of the world are too complex to be reduced to simple hierarchical structures Our software related affairs in particular cannot be represented in this fashion And yet all programming theories and development systems and all software applications attempt to reduce real world problems to neat hierarchical structures of data operations and features Using Karl Popper's famous principles of demarcation between science and pseudoscience the book shows that the mechanistic ideology has turned most of our software related activities into pseudoscientific pursuits Using mechanism as warrant the software elites are promoting invalid even fraudulent software notions They force us to depend on generic inferior systems instead of allowing us to develop software skills and to create our own systems Software mechanism emulates the methods of manufacturing and thereby restricts us to high levels of abstraction and simple isolated structures The benefits of software however can be attained only if we start with low level elements and learn to create complex interacting structures Software the book argues is a non mechanistic phenomenon So it is akin to language not to physical objects Like language it permits us to mirror the world in our minds and to communicate with it Moreover we increasingly depend on software in everything we do in the same way that we depend on language Thus being restricted to mechanistic software is like thinking and communicating while being restricted to some ready made sentences supplied by an elite Ultimately by impoverishing software our elites are achieving what the totalitarian elite described by George Orwell in *Nineteen Eighty Four* achieves by impoverishing language they are degrading our minds
