Cancer Cell Lines Part 2 John Masters, Bernhard Ø Palsson, 2010-12-04 Continuous cell lines derived from human cancers are the most widely used resource in laboratory based cancer research The first 3 volumes of this series on Human Cell Culture are devoted to these cancer cell lines The chapters in these first 3 volumes have a common aim Their purpose is to address 3 questions of fundamental importance to the relevance of human cancer cell lines as model systems of each type of cancer 1 Do the cell lines available accurately represent the clinical presentation 2 Do the cell lines accurately represent the histopathology of the original tumors 3 Do the cell lines accurately represent the molecular genetics of this type of cancer The cancer cell lines available are derived in most cases from the more aggressive and advanced cancers There are few cell lines derived from low grade organ confined cancers This gap can be filled with conditionally immortalized human cancer cell lines We do not know why the success rate for establishing cell lines is so low for some types of cancer and so high for others The histopathology of the tumor of origin and the extent to which the derived cell line retains the differentiated features of that tumor are critical The concept that a single cell line derived from a tumor at a particular site is representative of tumors at that site is naive and misleading

Cancer Cell Lines Bernhard Ø Palsson, John Masters, 2000-11-30 This book describes all human leukemia lymphoma cell lines that have been established and that grow continuously under standardised in vitro conditions These lines are derived from cells belonging to all the major hematopoietic cell lineages i e B and T lymphocytes natural killer cells granulocytic cells and megakaryocytic cells The clinical data the culture conditions and the major phenotypic features of the cell lines are described with citations This book is the first book describing human leukemia lymphoma cell lines and will be of interest to scientists involved in the areas of hematology oncology immunology molecular biology and cytogenetics

Cancer Cell Lines Volumes 1 3 These 3 volumes provide a comprehensive text on the culture of established cell lines from every type of human cancer The volumes provide a basic manual and reference resource for every cancer research scientist using human cancer cells

Cancer Cell Lines Part 1 John Masters, Bernhard Ø Palsson, 2006-04-11 Continuous cell lines derived from human cancers are the most widely used resource in laboratory based cancer research The first 3 volumes of this series on Human Cell Culture are devoted to these cancer cell lines The chapters in these first 3 volumes have a common aim Their purpose is to address 3 questions of fundamental importance to the relevance of human cancer cell lines as model systems of each type of cancer 1 Do the cell lines available accurately represent the clinical presentation 2 Do the cell lines accurately represent the histopathology of the original tumors 3 Do the cell lines accurately represent the molecular genetics of this type of cancer The cancer cell lines available are derived in most cases from the more aggressive and advanced cancers There are few cell lines derived from low grade organ confined cancers This gap can be filled with conditionally immortalized human cancer cell lines We do not know why the success rate for establishing cell lines is so low for some types of cancer and so high for others The histopathology of the tumor of origin

and the extent to which the derived cell line retains the differentiated features of that tumor are critical. The concept that a single cell line derived from a tumor at a particular site is representative of tumors at that site is naive and misleading.

Cancer Cell Lines John R. W. Masters, Bernhard Palsson, 2000. This book describes all human leukemia lymphoma cell lines that have been established and that grow continuously under standardised in vitro conditions. These lines are derived from cells belonging to all the major hematopoietic cell lineages i.e. B and T lymphocytes, natural killer cells, granulocytic cells and megakaryocytic cells. The clinical data, the culture conditions and the major phenotypic features of the cell lines are described with citations. This book is the first book describing human leukemia lymphoma cell lines and will be of interest to scientists involved in the areas of hematology, oncology, immunology, molecular biology and cytogenetics. **Cancer Cell Lines Volumes 1-3**. These 3 volumes provide a comprehensive text on the culture of established cell lines from every type of human cancer. The volumes provide a basic manual and reference resource for every cancer research scientist using human cancer cells.

Cancer Cell Culture Simon P. Langdon, 2008-02-01. The culture of cancer cells is routinely practiced in many academic research centers, biotechnology companies and hospital laboratories. **Cancer Cell Culture: Methods and Protocols** describes easy to follow methods to guide both novice and more experienced researchers seeking to use new techniques in their laboratories. Our present understanding of the cell and molecular biology of cancer has been derived mainly from the use of cultured cancer cells and we cover a number of the most widely used assays to study function in current use. Part I introduces the basic concept of cancer cell culture and this is followed by a description of the general techniques used in many cell culture facilities. The importance of cell line characterization is now widely recognized and methods to characterize and authenticate cell lines are described in Part II. Part III covers the isolation and development of specific cancer cell types and provides valuable tips for those wishing to derive new cell line models. A wide range of procedures encompassing many of the key functional features of cancer cells are described in Part IV, including assays to evaluate clonogenicity, cell proliferation, apoptosis, adhesion, migration, invasion, senescence, angiogenesis and cell cycle parameters. Methods to modify cancer cells are described in Part V, including protocols for transfection, development of drug resistance, immortalization and transfer in vivo. In Part VI, methods of coculture of different cell types and contamination of cell lines are covered.
