Visible Learning John Hattie, 2008-11-19 This unique and ground breaking book is the result of 15 years research and synthesises over 800 meta analyses on the influences on achievement in school aged students It builds a story about the power of teachers feedback and a model of learning and understanding The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning Areas covered include the influence of the student home school curricula teacher and teaching strategies A model of teaching and learning is developed based on the notion of visible teaching and visible learning A major message is that what works best for students is similar to what works best for teachers an attention to setting challenging learning intentions being clear about what success means and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand Although the current evidence based fad has turned into a debate about test scores this book is about using evidence to build and defend a model of teaching and learning A major contribution is a fascinating benchmark dashboard for comparing many innovations in teaching and schools

The Lean Education Manifesto Arran Hamilton, John Hattie, 2022-03-30 The global expansion of education is one of the greatest successes of the modern era More children have access to schooling and leave with higher levels of learning than at any time in history However 250 million children in developing countries are still not in school and 600 million attend but get little out of it a situation further exacerbated by the dislocations from COVID 19 In a context where education funding is stagnating and even declining Arran Hamilton and John Hattie suggest that we need to start thinking Lean and explicitly look for ways of unlocking more from less Drawing on data from 900 systematic reviews of 53 000 research studies from the perspective of efficiency of impact they controversially suggest that for low and middle income countries Maybe pre service initial teacher training programs could be significantly shortened and perhaps even stopped Maybe teachers need not have degree level qualifications in the subjects they teach and they might not really need degrees at all Maybe the hours per week and years of schooling that each child receives could be significantly reduced or at least not increased Maybe learners can be taught more effectively and less resource intensively in mixed age classrooms with peers tutoring one another Maybe different approaches to curriculum instruction and the length of the school day might be more cost effective ways of driving up student achievement than hiring extra teachers reducing class sizes or building more classrooms Maybe school based management public private partnerships and performance related pay are blind and expensive alleys that have limited influence or impact on what teachers actually do in classrooms This groundbreaking and thought provoking work also identifies a range of initiatives that are worth starting It introduces the Learning to GO L D methodology to support school and system leaders in selecting implementing and scaling those high probability initiatives and to rigorously de implement those to be stopped It is essential reading for anyone with an interest in education
