Climate Change Everyone Needs Know:

Climate Change Joseph Romm, 2015-11-05 Climate change will have a bigger impact on humanity than the Internet has had. The last decade's spate of superstorms, wildfires, heat waves, and droughts has accelerated the public discourse on this topic and lent credence to climatologist Lonnie Thomson's 2010 statement that climate change represents a clear and present danger to civilization. In June 2015, the Pope declared that action on climate change is a moral issue. This book offers the most up-to-date examination of climate change's foundational science, its implications for our future, and the core clean energy solutions. Alongside detailed but highly accessible descriptions of what is causing climate change, this entry in the What Everyone Needs to Know series answers questions about the practical implications of this growing force on our world: How will climate change impact you and your family in the coming decades? What are the future implications for owners of coastal property? Should you plan on retiring in South Florida or the U.S. Southwest or Southern Europe? What occupations and fields of study will be most in demand in a globally warmed world? What impact will climate change have on investments and the global economy? As the world struggles to stem climate change and its effects, everyone will become a part of this story of the century. Here is what you need to know. *Climate Change* Joseph Romm, 2022 This chapter focuses on climate science as it applies to what science can tell us about the changes we have observed to date and what caused them. The goal is to answer the key questions that people ask about the science. Teaching Climate Change Vandana Singh, 2023-12-21 *Teaching Climate Change: Science Stories* Justice shows educators how climate change can be taught from any disciplinary perspective and in a transdisciplinary way, drawing on examples from the author's own classroom. The book sets out a radical vision for climate pedagogy, introducing an innovative framework in which the scientific essentials of climate change are scaffolded via three transdisciplinary meta-concepts: Balance, Imbalance, Critical Thresholds, and Complex Interconnections. Author Vandana Singh grounds this theory in practice, drawing on examples from her own classroom to provide implementable ideas for educators and to demonstrate how climate change can be taught from any disciplinary perspective in a transdisciplinary way. The book also explores the barriers to effective climate education at a macro level, focusing on issues such as climate misinformation, misconception, the exclusion of social and ethical concerns, and a focus on technofixes. Singh uses this information to identify four key dimensions for an effective climate pedagogy in which issues of justice are central: scientific, technological, the transdisciplinary, the epistemological, and the psychosocial. This approach is broad and flexible enough to be adapted to different classrooms and contexts. Bridging the social and natural sciences, this book will be an essential resource for all climate change educators practicing in both formal and informal settings, as well as for community climate activists. *What Everyone Needs to Know about Tax* James Hannam, 2017-02-28 You are paying much more in tax than you think you are. *What Everyone Needs to Know About Tax* takes an entertaining and informative look at the UK tax system in all its glory to show you just how much you pay, how the money is collected, and how it affects ordinary
