Climate Change In Prehistory The End Of The Reign Of Chaos:

Climate Change in Prehistory William James Burroughs, 2005-06-13 How did humankind deal with the extreme challenges of the last Ice Age How have the relatively benign post Ice Age conditions affected the evolution and spread of humanity across the globe By setting our genetic history in the context of climate change during prehistory the origin of many features of our modern world are identified and presented in this illuminating book It reviews the aspects of our physiology and intellectual development that have been influenced by climatic factors and how features of our lives diet language and the domestication of animals are also the product of the climate in which we evolved In short climate change in prehistory has in many ways made us what we are today Climate Change in Prehistory weaves together studies of the climate with anthropological archaeological and historical studies and will fascinate all those interested in the effects of climate on human development and history

Encyclopedia of Global Warming and Climate Change, Second Edition S. George Philander, 2012-06-13 The First Edition of the Encyclopedia of Global Warming and Climate Change provided a multi authored academic yet non technical resource for students and teachers to understand the importance of global warming to appreciate the effects of human activity and greenhouse gases around the world and to learn the history of climate change and the research enterprise examining it This edition was well received with notable reviews Since its publication the debate over the advent of global warming at least partially brought on by human enterprise has continued to ebb and flow depending literally on the weather politics and media coverage of climate summits and debates Advances in research also change the discourse as new data is collected and new scientific projects continue to explore and explain global warming and climate change Thus a new Second Edition updates more than half of the original entries and adds new perspectives and content to keep students and researchers up to date in a field that has proven provocatively lively

THE CAUSES AND EFFECTS OF THE EARTH'S CLIMATE CHANGES Bogdan Jacek Góralski, 2023-03-22 I dedicate my book to people who are hungry for knowledge who will build the future world and achieve the goal of evolution

The Anthropology of Climate Change Hans Baer, Merrill Singer, 2014-04-24 In addressing the urgent questions raised by climate change this book provides a comprehensive overview of the anthropology of climate change guided by a critical political ecological framework It argues that anthropologists must significantly expand their focus on climate change and their contributions to responding to climate change as a grave risk to humanity The book presents a human socioecological framework for conceptualizing climate change It examines the emergence and slow maturation of the anthropology of climate change reviews the historic foundations for this work in the archaeology of climate change and presents three alternative contemporary theoretical perspectives in the anthropology of climate change The book synthesizes anthropological work and perspectives on climate change in the form of case studies in various regions of the world revealing the nature of global climate change as constituting multiple and somewhat diverse changes in local settings It explores the applied anthropology of climate change

in terms of the ways anthropologists are contributing to climate policy working with communities on climate change issues as well as within the climate movement both internationally and nationally Finally it provides an overview of what other the social sciences are saying about climate change and explores ways that the anthropology of climate change can interface with sociology political science and human geography in order to create an integrated social science of climate change This book gives researchers and students in Environmental Anthropology Climate Change Human Geography and Sociology a novel framework for understanding climate change that emphasizes human socioecological interactions **Climate Change and the Course of Global History** John L. Brooke,2014-03-17 The first global study by a historian to fully integrate the earth system approach of the new climate science with the material history of humanity **Climate Change: An Archaeological Study** John D. Grainger,2020-12-14 How prehistoric humans coped with the end of the last Ice Age and catastrophic global warming Global warming is among the most urgent problems facing the world today Yet many commentators and even some scientists discuss it with reference only to the changing climate of the last century or so John Grainger takes a longer view and draws on the archaeological evidence to show how our ancestors faced up to the ending of the last Ice Age arguably a more dramatic climate change crisis than the present one Ranging from the Paleolithic down to the development of agriculture in the Neolithic the author shows how human ingenuity and resourcefulness allowed them to adapt to the changing conditions in a variety of ways as the ice sheets retreated and water levels rose Different strategies from big game hunting on the ice nomadic hunter gathering sedentary foraging and finally farming were developed in various regions in response to local conditions as early man colonized the changing world The human response to climate change was not to try to stop it but to embrace technology and innovation to cope with it *Facing the Anthropocene* Ian Angus,2016-07 Science tells us that a new and dangerous stage in planetary evolution has begun the Anthropocene a time of rising temperatures extreme weather rising oceans and mass species extinctions Humanity faces not just more pollution or warmer weather but a crisis of the Earth System If business as usual continues this century will be marked by rapid deterioration of our physical social and economic environment Large parts of Earth will become uninhabitable and civilization itself will be threatened Facing the Anthropocene shows what has caused this planetary emergency and what we must do to meet the challenge Bridging the gap between Earth System science and ecological Marxism Ian Angus examines not only the latest scientific findings about the physical causes and consequences of the Anthropocene transition but also the social and economic trends that underlie the crisis Cogent and compellingly written Facing the Anthropocene offers a unique synthesis of natural and social science that illustrates how capitalism's inexorable drive for growth powered by the rapid burning of fossil fuels that took millions of years to form has driven our world to the brink of disaster Survival in the Anthropocene Angus argues requires radical social change replacing fossil capitalism with a new ecosocialist civilization Quaternary Ecology, Evolution, and Biogeography Valentí Rull,2020-03-05 Quaternary Ecology Evolution and

Biogeography offers an introduction to the study of the ecological and evolutionary processes that have shaped our present biosphere under the influence of glacial interglacial cycles. Written by an ecologist with paleoecological expertise, this book reviews the climatic changes that have occurred during the last 2.6 million years along with the responses of organisms and ecosystems. It offers an understanding of the evolutionary origin of extant biodiversity, its biogeographical patterns, and the composition of modern ecological communities. In addition, it explores human evolution and the influence of our activities on the biosphere, especially in the last millennia. This book offers the latest information on how studying the past can contribute to our understanding of present climate issues for a better future and is an ideal resource for researchers and students in the natural sciences. Includes the latest developments in genomics and their relevance within Quaternary evolution. Offers a holistic view of the origin of biodiversity patterns and community assembly. Discusses the role of climate on human evolution and the ecological consequences for natural systems.

Ancient Pathways, Ancestral Knowledge Nancy J. Turner, 2014-06-01

Volume 1: The History and Practice of Indigenous Plant Knowledge
Volume 2: The Place and Meaning of Plants in Indigenous Cultures and Worldviews

Nancy Turner has studied Indigenous peoples' knowledge of plants and environments in northwestern North America for over forty years. In *Ancient Pathways, Ancestral Knowledge*, she integrates her research into a two-volume ethnobotanical tour de force. Drawing on information shared by Indigenous botanical experts and collaborators, the ethnographic and historical record, and from linguistics, palaeobotany, archaeology, phytogeography, and other fields, Turner weaves together a complex understanding of the traditions of use and management of plant resources in this vast region. She follows Indigenous inhabitants over time and through space, showing how they actively participated in their environments, managed and cultivated valued plant resources, and maintained key habitats that supported their dynamic cultures for thousands of years, as well as how knowledge was passed on from generation to generation and from one community to another. To understand the values and perspectives that have guided Indigenous ethnobotanical knowledge and practices, Turner looks beyond the details of individual plant species and their uses to determine the overall patterns and processes of their development, application, and adaptation. Volume 1 presents a historical overview of ethnobotanical knowledge in the region before and after European contact. The ways in which Indigenous peoples used and interacted with plants for nutrition, technologies, and medicine are examined. Drawing connections between similarities across languages, Turner compares the names of over 250 plant species in more than fifty Indigenous languages and dialects to demonstrate the prominence of certain plants in various cultures and the sharing of goods and ideas between peoples. She also examines the effects that introduced species and colonialism had on the region's Indigenous peoples and their ecologies. Volume 2 provides a sweeping account of how Indigenous organizational systems developed to facilitate the harvesting, use, and cultivation of plants to establish economic connections across linguistic and cultural borders and to preserve and manage resources and habitats. Turner describes the worldviews and philosophies that emerged from the interactions between

peoples and plants and how these understandings are expressed through cultures stories and narratives Finally she explores the ways in which botanical and ecological knowledge can be and are being maintained as living adaptive systems that promote healthy cultures environments and indigenous plant populations Ancient Pathways Ancestral Knowledge both challenges and contributes to existing knowledge of Indigenous peoples land stewardship while preserving information that might otherwise have been lost Providing new and captivating insights into the anthropogenic systems of northwestern North America it will stand as an authoritative reference work and contribute to a fuller understanding of the interactions between cultures and ecological systems

The Birth of the Anthropocene Jeremy Davies, 2016-05-24 The world faces an environmental crisis unprecedented in human history Carbon dioxide levels have reached heights not seen for three million years and the greatest mass extinction since the time of the dinosaurs appears to be underway Such far reaching changes suggest something remarkable the beginning of a new geological epoch It has been called the Anthropocene The Birth of the Anthropocene shows how this epochal transformation puts the deep history of the planet at the heart of contemporary environmental politics By opening a window onto geological time the idea of the Anthropocene changes our understanding of present day environmental destruction and injustice Linking new developments in earth science to the insights of world historians Jeremy Davies shows that as the Anthropocene epoch begins politics and geology have become inextricably entwined
