**Planet** Herbert A. Hutchinson, 2025-07-06 The climate is changing but is factually proven in the big picture to be caused by astrophysical geophysical and natural regional causes and little by Man created greenhouse gas emissions Environmental scientists use of a one size fits all average global temperature land and oceans surfaces for the planet is factually disproven in this book as being a valid indicator of the climate affecting all regions of the planet Humans must survive seasonal extremes of hot and cold temperature in a region not a benign annual average global temperature The over exaggerations in a hastily created hypothesis that Man burning fossil fuels creates greenhouse gas emissions which are the dominant cause for adverse climate change and at an ominous crisis rate are fear mongering and of devious intent The hypothesis is disproven when credible scientific databases of dynamic factors affecting the climate are factually considered and logically

interpreted for their causal effects This book has factually shown that the average global temperature and one size fits all goals of the environmental science groups especially those in the United Nations Intergovernmental Panel on Climate Change IPCC to limit the change in average global temperature to not exceed two degrees Centigrade by 2035 and achieve net zero greenhouse gas emissions by 2050 are baseless Even if fully achieved the present combat of climate change and reduction of greenhouse gas emissions will bring little if any change in the surface temperature or climate in most regions The goal should be to protect human safety health comfort and safe transportation not to preserve the environment at any cost to the human population

It is a collaborative effort of distinguished experts from around the world and adopts a holistic approach to adaptation taking a global view with a focus on the international, the regional and domestic levels. This publication has a wealth of information illustrating the issue of adaptation with many examples from all over the world. One of the most valuable aspects of this book ensuring that it will have a lasting value is that it discusses all fields of law which are vulnerable to climate change such as tort law, insurance law, disaster law, marine law, water law, planning law, construction law, environmental law, forestry, energy law, biodiversity. The book also includes general issues of adaptation such as climate justice and the relationship between adaptation and development, human rights in the context of migration law and compensation. It is written in a very accessible language and will be an indispensable reading for both scholars and practitioners. The content and structure of the book make it a definitive book on climate adaptation. Malgosia Fitzmaurice, Queen Mary University of London, UK. This book indeed will become the definitive text on climate adaptation law for the coming years. From a global law perspective, Verschuuren and his team analyse in an outstanding way the legal challenges and barriers to climate change adaptation and how they can be overcome. Just like climate change, this book is here to stay. Kurt De Ketelaere, KU Leuven, League of European Research Universities, LERU, Belgium. This timely Research Handbook discusses the challenges brought about by the need to adapt to a changing climate. It considers how adaptation is necessary to address impacts resulting from the warming of the Earth's atmosphere which is already unavoidable due to past emissions. With adaptation policies around the world still in their infancy, the book examines the legal challenges and barriers to climate change adaptation and how can they be overcome. It brings together expert contributors to consider topics ranging across tort and insurance law, disaster law, water law, marine law, planning law, biodiversity law, green buildings, pollution control, displacement, agriculture and energy. With its transnational and multilevel approach, the Research Handbook on Climate Change Adaptation Law will be an essential resource for academics in the field of climate change policy and law, policymakers and other government officials working on climate change and NGOs working in the field of climate change.
