Climate Economics The State Of The Art Routledge Studies In Ecological Economics:

Climate Economics Frank Ackerman, Elizabeth A. Stanton, 2013 Climate science paints a bleak picture The continued growth of greenhouse gas emissions is increasingly likely to cause irreversible and catastrophic effects Urgent action is needed to prepare for the initial rounds of climatic change which are already unstoppable While the opportunity to avert all climate damage has now passed well designed mitigation and adaptation policies if adopted quickly could still greatly reduce the likelihood of the most tragic and far reaching impacts of climate change Climate economics is the bridge between science and policy translating scientific predictions about physical systems into projections about economic growth and human welfare that decision makers can most readily use but it has too often consisted of an overly technical academic approach to the problem Getting climate economics right is not about publishing the cleverest article of the year but rather about helping solve the dilemma of the century The tasks ahead are daunting and failure unfortunately is quite possible Better approaches to climate economics will allow economists to be part of the solution rather than part of the problem This book analyzes potential paths for improvement *Mathematical Modeling in Economics, Ecology and the Environment* Natali Hritonenko, Yuri Yatsenko, 2014-01-08 Updated to textbook form by popular demand this second edition discusses diverse mathematical models used in economics ecology and the environmental sciences with emphasis on control and optimization It is intended for graduate and upper undergraduate course use however applied mathematicians industry practitioners and a vast number of interdisciplinary academics will find the presentation highly useful Core topics of this text are Economic growth and technological development Population dynamics and human impact on the environment Resource extraction and scarcity Air and water contamination Rational management of the economy and environment Climate change and global dynamics The step by step approach taken is problem based and easy to follow The authors aptly demonstrate that the same models may be used to describe different economic and environmental processes and that similar investigation techniques are applicable to analyze various models Instructors will appreciate the substantial flexibility that this text allows while designing their own syllabus Chapters are essentially self contained and may be covered in full in part and in any order Appropriate one and two semester courses include but are not limited to Applied Mathematical Modeling Mathematical Methods in Economics and Environment Models of Biological Systems Applied Optimization Models and Environmental Models Prerequisites for the courses are Calculus and preferably Differential Equations *Handbook on the Economics of Climate Change* Graciela Chichilnisky, Armon Rezai, 2020-06-26 This timely Handbook recognises the emergence of climate change as the defining topic of our time With public climate discourse growing more urgent every year this Handbook brings together international experts from different economic disciplines to answer critical climate policy questions **The Oxford Handbook of the Macroeconomics of Global Warming** Lucas Bernard, Willi Semmler, 2015 The Oxford Handbook of the Macroeconomics of Global Warming analyzes the macroeconomics of global warming especially the economics of possible

preventative measures various policy changes and potential effects of climate change on developing and developed nations
Journal of Economic Literature ,2014 *Climate Change and Global Equity* Frank Ackerman,Elizabeth A.

Stanton,2015-03-15 Ambitious measures to reduce carbon emissions are all too rare in reality impeded by economic and political concerns rather than technological advances In this timely collection of essays Frank Ackerman and Elizabeth A Stanton show that the impact of inaction on climate change will be far worse than the cost of ambitious climate policies

environmental managers and many institutions are now developing teaching programmes to equip the next generation with the skills needed to apply the concepts more effectively This handbook provides a comprehensive reference text on ecosystem services integrating natural and social science including economics Collectively the chapters written by the world's leading authorities demonstrate the importance of biodiversity for people policy and practice They also show how the value of ecosystems to society can be expressed in monetary and non monetary terms so that the environment can be better taken into account in decision making The significance of the ecosystem service paradigm is that it helps us redefine and better communicate the relationships between people and nature It is shown how these are essential to resolving challenges such as sustainable development and poverty reduction and the creation of a green economy in developing and developed world contexts
