Educating for Radical Social Transformation in the Climate Crisis Stuart Tannock, 2021-09-21 This book asks how education can be developed to facilitate the radical social, cultural and economic transformations needed to deal with the ongoing climate emergency. The author illuminates important links between the work currently being done in climate change and education and the broader and older theories of radical education, an area of education theory and practice that has long grappled with the question of how to use education to create a more just society. Highlighting both current work and long traditions that include popular, progressive, feminist, anti-racist and anti-colonial education, the author draws on interdisciplinary research to make the case for how radical education can help tackle the climate change crisis. It will have direct relevance for scholars of environmental education and radical education as well as activists and practitioners.

Climate Change in the Classroom: Secondary Teacher Education Course on Climate Change Education for Sustainable Development, *Climate Change and the Role of Education* Walter Leal Filho, Sarah L.

Hemstock, 2019-11-28 This book offers insights into the educational dimensions of climate change and promotes measures to improve education in this context. It is widely believed that education can play a key role in finding global solutions to many problems related to climate change. Indeed, education as a process not only helps young people to better understand and address the impact of global warming but also fosters better attitudes and behaviours to aid efforts towards mitigating climate change and adapting to a changing environment. But despite the central importance of education in relation to climate change, there is a paucity of publications on this theme. Against this background, the book focuses on the educational

aspects of climate change and showcases examples of research projects and other initiatives aimed at educating various audiences. It also provides a platform for reflections on the role education can play in fostering awareness on a changing climate. Presenting a wide range of valuable lessons learned which can be adapted and replicated elsewhere, the book appeals to educators and practitioners alike.

Climate Change Education Chang Chew Hung, 2022-12-30

Climate change is complex and there is a need to educate our future generations so that they are able to deal with the plethora of information and views that they come into contact with in their lives. This book inquires into what it means to teach and learn about climate change. Now in its second edition, Chang further explores what education for climate change entails, discussing the concept of climate change education (CCE) itself, how it is taught in schools, and how public education is being carried out. Featuring updated literature in a quickly advancing field, the book defines CCE for the global citizen and looks at pedagogies supporting CCE. It also identifies teachers as key stakeholders in climate change discourse, how to improve teacher readiness on the topic, and how teacher professional development can support successful implementation of CCE. This book will be invaluable to climate change educators and can act as a reference resource for teachers, education policymakers, and public education agencies.
