

Compilation

Model of Compilation:

- Given some hard-to-program machine, say M_1 ...
- Find some easier-to-program language L_2 (perhaps for a more complicated machine, M_2); write programs in that language
- Build a translator (compiler) that translates programs from M_2 's language to M_1 's language. May run on M_1 , M_2 , or some other machine.

Interpretation and compilation: two ways to execute high-level languages

- **Both** allow changes in the source program
- **Both** afford programming applications in platform (e.g., processor) independent languages
- **Both** are widely used in modern computer systems!

The Language Complexity Game Eric Sven Ristad, 1993 This work elucidates the structure and complexity of human language in terms of the mathematics of information and computation It strengthens Chomsky s early work on the mathematics of language with the advantages of a better understanding of language and a more precise theory of structural complexity Ristad argues that language is the process of constructing linguistic representations from the forms produced by other cognitive modules and that this process is NP complete This NP completeness is defended with a phalanx of elegant and revealing proofs that rely only on the empirical facts of linguistic knowledge and on the uncontroverted assumption that these facts generalize in a reasonable manner For this reason these complexity results apply to all adequate linguistic theories and are the first to do so Eric Sven Ristad is Assistant Professor of Computer Science at Princeton University He is the coauthor of Computational Complexity and Natural Language Contents Foundation of the Investigation Anaphora Ellipsis Phonology Syntactic Agreement and Lexical Ambiguity Philosophical Issues
