Wick,2013-09-10 All microbes including bacteria viruses and fungi can be classified and identified by matching a few peptides known to be unique to each organism Identifying Microbes by Mass Spectrometry Proteomics describes ways to identify microorganisms using powerful new techniques combining hardware and software and yielding highly accurate methods for detection identification and classification of microbes This straightforward technology can be used to detect unknown and unsequenced microorganisms as well as microbes in complex environmental samples This book reviews various mass analyzers used for detection and describes ionization methods frequently used for analysis of microbial constituents a necessary step in the preparation of mass spectrometry MS samples The text also discusses diverse processing methods which are used to analyze MS files for matching mass spectral profiles and examines protein and nucleic acid sequence based methods capable of classification and identification of microbial agents The book also covers sample collection methods and specific sample preparation techniques The text addresses using computer software and bioinformatics approaches for data mining to discriminate microbes using mass spectrometry proteomics MSP It also discusses historical pattern recognition based methods and other approaches such as analysis of pyrolysis products chemical ionization CI of fatty acid methyl esters and MALDI MS The text contains examples of the application of the MSP technique for microbe detection and includes a survey of suitable and commercially available MS based platforms Successful applications include the identification of unknown microbes in honey bees associated with colony collapse disorder and the analysis of virus strains from the 2009 influenza pandemic The final chapter outlines future trends in these groundbreaking uses of MS techniques which are fast not limited by sample type and show potential in answering complex environmental questions

Change in Epidemiology and Etiology of Respiratory Tract and Gastrointestinal Infections during COVID-19 Pandemic Philippe Gautret,Philippe Colson,Jaffar Al-Tawfiq,2024-08-28 The COVID 19 pandemic has had a significant impact on the epidemiology and etiology of respiratory tract and gastrointestinal infections The implementation of control measures such as social distancing and hand hygiene was associated with a decrease in the incidence of some respiratory and gastrointestinal infections caused by other viruses and bacteria Epidemiological data suggest that the incidence of respiratory tract infections other than SARS CoV 2 infection has decreased during the COVID 19 pandemic possibly due to the adoption of several non pharmaceutical interventions in public areas Currently there is very little research on the

interaction between SARS CoV 2 and other infectious pathogens in terms of microbiome and virome As a matter of fact changes in the epidemiology of respiratory and gastrointestinal infections may be due to other causes than SARS CoV 2 specific control measures It is still unclear whether these changes might result from direct interaction between SARS CoV 2 and the microbiome and or virome Continuous and ongoing efforts to understand the impact of the COVID 19 pandemic on infectious diseases are critical in advancing scientific discovery for prevention and treatment strategies for future pandemics Through this research theme we aim to explore scientific gaps related to our understanding of the changes in epidemiology and pathogenic agents responsible for respiratory tract and gastrointestinal infections during the COVID 19 pandemic
