Data Management for Mobile Computing Evaggelia Pitoura, George Samaras, 2012-12-06 Earth date August 11 1997
Beam me up Scottie We cannot do it This is not Star Trek s Enterprise This is early years Earth True this is not yet the era of Star Trek we cannot beam captain James T Kirk or captain Jean Luc Picard or an apple or anything else anywhere What we can do though is beam information about Kirk or Picard or an apple or an insurance agent We can beam a record of a patient the status of an engine a weather report We can beam this information anywhere to mobile workers to field engineers to a track loading apples to ships crossing the Oceans to web surfers We have reached a point where the promise of information access anywhere and anytime is close to realization The enabling technology wireless networks exists what remains to be achieved is providing the infrastructure and the software to support the promise Universal access and management of information has been one of the driving forces in the evolution of computer technology Central computing gave the ability to perform large and complex computations and advanced information manipulation Advances in networking connected computers together and led to distributed computing Web technology and the Internet went even further to provide hyper linked information access and global computing However restricting access stations to physical location limits the boundary of the vision **Mobile Data Management** Ming-Syan Chen, 2003-01-07 This book constitutes the refereed proceedings of the 4th International Conference on Mobile Data Management MDM 2003 held in Melbourne Australia in January 2003 The 21 revised full papers and 15 revised short papers presented were carefully reviewed and selected from 87 submissions The papers are organized in topical sections on storage management location tracking information management location aware services context aware services resource discovery location management storage management and query processing and context aware information services *Data Management Systems* Bhavani Thuraisingham, 1997-05-19 As the information contained in databases has become a critical resource in organizations efficient access to that information and the ability to share it among different users and across different systems has become an urgent need The interoperability of heterogeneous database systems literally the ability to access information between or among differing types of databases is the topic of this timely book In the last two decades tremendous improvements in tools and technologies have resulted in new products that provide distributed data processing capabilities This book describes these tools and emerging technologies explaining the essential concepts behind the topics but focusing on practical applications Selected products are discussed to illustrate the characteristics of the different technologies This is an ideal source for anyone who needs a broad perspective on heterogeneous database integration and related technologies Mobile Computing Shambhu Upadhyaya, Abhijit Chaudhury, Kevin Kwiat, Mark Weiser, 2005-12-17 Mobil Computing Implementing Pervasive Information and Communication Technologies is designed to address some of the business and technical challenges of pervasive computing that encompass current and emerging technology standards infrastructures and architectures and innovative and high impact applications of

mobile technologies in virtual enterprises The various articles examine a host of issues including the challenges and current solutions in mobile connectivity and coordination management infrastructures innovative architectures for fourth generation wireless and Ad hoc networks error free frequency assignments for wireless communication cost effective wavelength assignments in optical communication networks data and transaction modeling in a mobile environment and bandwidth issues and data routing in mobile Ad hoc networks Content Computing Chi-Hung Chi,Kwok-Yan Lam,2005-01-25

Welcome to the Advanced Workshop on Content Computing 2004 The focus of this workshop was Content Computing It emphasized research areas that facilitate efficient appropriate dissemination of content to users with the necessary access rights We use the word content instead of information or data because we want to cover not only raw data but also presentation quality The fast growth of the Internet has already made it the key infrastructure for information dissemination education business and entertainment While the client server model has been the most widely adopted paradigm for the WWW the desire to provide more value added services in the delivery layer has led to the concept of an active network where content driven intelligent computation will be performed to provide quality of service for content presentation and best t client demand These value added services typically aim to enhance information security provide pervasive Internet access and improve application robustness system network performance knowledge extraction etc They are realized by incorporating sophisticated mechanisms at the delivery layer which is transparent to the content providers and Web surfers Consequently the notion of Content Computing has emerged Content computing is a new paradigm for coordinating distributed systems and intelligent networks based on a peer to peer model and with value added processing of the application specific contents at the livery layer This paradigm is especially useful to pervasive lightweight client devices such as mobile and portable end user terminals with a wide variation of hardware software configurations This year the workshop was held in Zhenjiang Jiangsu China We received 194 high quality papers from 11 regions namely PR China Korea Singapore Japan United States Canada Australia Germany Taiwan Italy and Hong Kong Totally 62 papers were accepted and presented in the workshop **Advanced Database Systems For Integration Of Media And User Environments '98: Advanced**

Database Research Yahiko Kambayashi,Akifumi Makinouchi,Yoshifumi Masunaga,Shunsuke Uemura,Katsumi Tanaka,1998-03-31 **Mobile Data Management** Kian-Lee Tan,Michael J. Franklin,John C.-S. Lui,2003-06-29 Welcome to the Second International Conference on Mobile Data Management MDM2001 The conference serves as a forum for the exchange of technical ideas and research results in the areas of mobility and database management This year we have a very exciting program for MDM2001 Many quality papers were submitted to the conference All of the submitted papers were viewed by at least three PC members Due to the limitations of the program schedule as well as the desire to organize the conference using a single track format we selected only 18 papers for full presentation at the conference As a result many excellent papers could not be accepted The papers chosen for presentation span a large range of topics from n work protocol

issues up to the semantics of mobile applications The common theme of all these papers is their recognition of the central role played by data management techniques in the development of the emerging world of mobile and wireless applications We have loosely organized these papers into six areas 1 DATA MANAGEMENT ARCHITECTURES 2 CONTENT DELIVERY 3 DATA BROADCASTING 4 CACHING AND HOARDING 5 COPING WITH MOVEMENT 6 NETWORKS AND SYSTEMS ISSUES In addition to the research track we have sought to broaden the scope of the conference with an industrial session as well as poster presentations Overall the program strikes a comfortable balance between applied and theoretically oriented papers
