SETTING

DETECTION BACKGROUND

- The sensor detects the mark alternating the red, green and blue emissions. Avoid mark movements during this phase.

- Position the background in front of the sensor light spot and press **BGCD** push-button. The sensor detects the mark alternating the red, green and blue emissions. Avoid background movements during this phase.

The **DARKLIGHT** operating mode is automatically selected by the sensor. Dark mark - light background = dark mode; light mark - dark background = light mode.

- If the **READY** LED is permanently ON, the detection is successful.
- If the LED blinks slowly, the detection has failed due to insufficient contrast.
- The sensor returns to the previous setting by pressing **MARK** or **BGCD** push-button.
- Repeat the procedure from the beginning.

OVERLOAD

- The digital output overload is signalled by the rapid blinking of the **READY** LED.

ACCESSORY FUNCTIONS

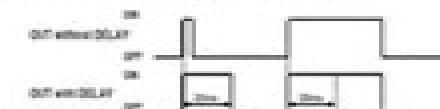

ANALOGUE output

The analogue output supplies a voltage proportional to the signal received by the sensor. The voltage supplied is 0 - 5 V.

The maximum voltage is obtained with reflective objects, on 80% while the voltage is equal to 2.2 V.

DELAY SETTING

The **DELAY** interval is 20ms, the minimum duration of the active output allowing the slower interfacing systems to detect shorter pulses.

Delay activation

- Connect Delay signal (grey wire) to power supply.

Delay deactivation

- Connect Delay signal (grey wire) to 0V or leave unconnected.

CONTROLS

OUT LED (yellow)
The out LED indicates the output status.

READY LED (green)
During functioning, the green LED permanently ON indicates a normal operating condition; fast blinking indicates an output overload condition.

MARK PUSH-BUTTON
The mark detection procedure is activated by pressing **MARK** push-button.

BGCD PUSH-BUTTON
The background detection procedure is activated by pressing **BGCD** push-button.

See the "SETTING" paragraph for setup procedure indications.

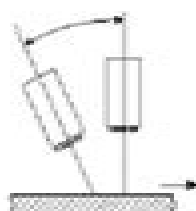

INSTALLATION

The sensor can be positioned by means of the two Ø4.7mm housing's holes using or threaded 3/64 holes with 4mm max. depth.

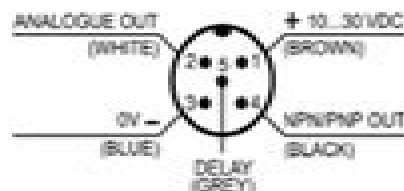

Warning: the use of excessively long wires can damage the product.
The connector can be oriented at five different positions, rotating the block. The position chosen is guaranteed by a mechanical blocking system. The rotation can be carried out even after sensor installation as the connector block is completely self-contained inside the housing.

The operating distance is measured starting from the lens front face. The reading direction can be changed inserting the cap and lens.
Mark detection on a reflective surface is improved adjusting the beam direction to 0° ... 20° from surface axis.

CONNECTIONS

The sensors are NOT safety devices, and are NOT NOT to be used in the safety control of the machines where installed.
